1952

May 3rd. PROFESSOR S. PODVINEC (Zagreb). "Physiology and Pathology of Soft Palate", with film on Plastic Operation for Open Rhinophonia.

A VALUABLE NEW AID FOR OTOSCLEROSIS OPERATIONS

In close co-operation with the Ear, Nose and Throat Clinic of Vienna University, the Reichert Optical Works have developed a specially designed Binocular Stereoscopic Microscope which has proved its usefulness during the performance of a great number of fenestration operations. This new instrument, which is called the

REICHERT OTOSCOPE

is now available. It provides an erected stereoscopic image and combines a long working distance with a wide field of view.

Two alternative magnification ranges are available: either from 3·2 to 12·5 times or from 6·3 to 25 times.

The instrument is supplied with built-in illumination equipment and a specially designed universally adjustable stand, which can be clamped to any operation table.

Further particulars are available on request.
