Hitachi H-9500 300kV TEM

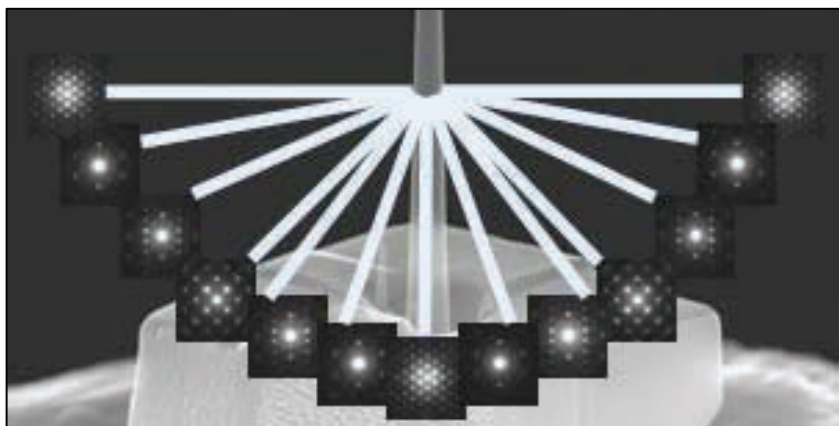

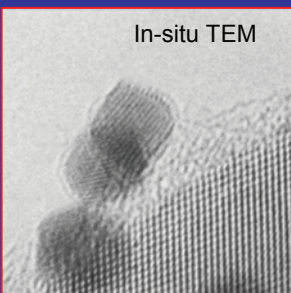

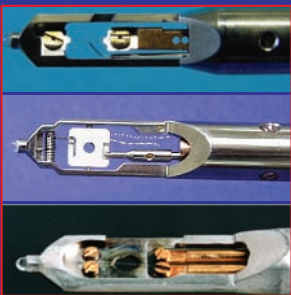

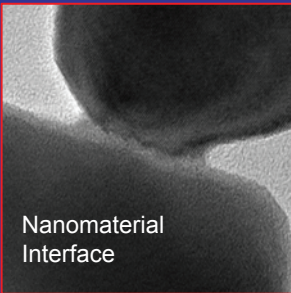

**High Sample Throughput
Ultra High Resolution
Special Features
Transmission Electron Microscope**

The Hitachi H-9500 300kV TEM is the indispensable tool for materials characterization.

From the semiconductor industry, materials sciences to biological sciences - this TEM provides atomic resolution microscopy for a variety of materials.

The unique pumping systems allows gas injections into the specimen chamber, with a variety of sample holders for in-situ heating, gas-solid interaction studies - all with atomic resolution imaging.

Stability, reliability and field proven performance - Hitachi.
