

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file aptpub.cls, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Research Papers

- 1 HARTO SAARINEN AND JUKKA LEMPA. Ergodic control of diffusions with random intervention times
 - 22 FABIAN A. HARANG, MARC LAGUNAS-MERINO AND SALVADOR ORTIZ-LATORRE. Self-exciting multifractional processes
 - 42 MADRS STEHR AND ANDERS RØNN-NIELSEN. Tail asymptotics of an infinitely divisible space-time model with convolution equivalent Lévy measure
 - 68 JEAN-RENAUD PYCKE. On a generalization of the Rényi–Srivastava characterization of the Poisson law
 - 83 OREN MANGOUBI, NATESH PILLAI AND AARON SMITH. Simple conditions for metastability of continuous Markov chains
 - 106 JOSEBA DALMAU AND MICHELE SALVI. Scale-free percolation in continuous space: quenched degree and clustering coefficient
 - 128 H. LEMAN AND J. C. PARDO. Extinction and coming down from infinity of continuous-state branching processes with competition in a Lévy environment
 - 140 ZEINA AL MASRY, SOPHIE MERCIER AND GHISLAIN VERDIER. Stochastic comparisons and ageing properties of an extended gamma process
 - 164 BENEDIKT KÖPFER AND LUDGER RÜSCHENDORF. The martingale comparison method for Markov processes
 - 177 SERVET MARTÍNEZ. Entropy of killed-resurrected stationary Markov chains
 - 197 JÖRN SASS, DOROTHEE WESTPHAL AND RALF WUNDERLICH. Diffusion approximations for randomly arriving expert opinions in a financial market with Gaussian drift
 - 217 DENIS DENISOV, ELENA PERFILEV AND VITALI WACHTEL. Tail asymptotics for the area under the excursion of a random walk with heavy-tailed increments
 - 238 YONG-HUA MAO AND TAO WANG. Lyapunov-type conditions for non-strong ergodicity of Markov processes
 - 254 ANDREAS E. KYPRIANOU, JUAN CARLOS PARDO AND MATIJA VIDMAR. Double hypergeometric Lévy processes and self-similarity
 - 274 KONSTANTIN BOROVKOV. Gaussian process approximations for multicolor Pólya urn models
- 287 APPLIED PROBABILITY TRUST PRIZES 2020
