

Scope of the Journal

Clay Minerals - Journal of Fine Particle Science publishes electronically and in paper form research papers about clays, clay minerals and related materials, natural or synthetic. Aspects covered include: Earth Processes (interactions in 'system earth' ± soil science, and geology/mineralogy) including genesis/synthesis, phase transformations, stability, weathering, soil-organic interactions, ion-exchange, basin analysis, clay petrology; Solid State Chemistry/Materials Science ± synthesis, structure and dynamics, reactivity, crystal chemistry, mechanical, thermal, electrical properties, micro and nanophase materials; Environmental Science ± analytical methods, elemental distribution, waste containment, health issues, environmental impact assessment, conservation of cultural heritage; Colloid/Surface Science ± adsorption, colloid stability, surface chemistry, reactivity; and Applied Science and Technology ± industrial uses and technical applications, including mining and processing of clay, zeolite (and other) deposits and application in ceramics, paper, paint, polymer, ion-exchange, sorption, catalysis etc.

Submission of manuscripts

In a letter accompanying the manuscript, the submitting author must state that all authors agree with the final version of the manuscript. The letter must also state that the manuscript has not previously been published elsewhere, either in full or in part, and that, while under review for Clay Minerals, it will not be submitted to any other publication. Authors are encouraged to suggest up to three possible reviewers for their papers.

All manuscripts are to be submitted online at <http://www.edmgr.com/clayminerals/>. The current set of instructions for authors is available at: <https://www.cambridge.org/CLM>

All authors are allowed, free of charge, an e-print of their papers published in the journal.

Join the Mineralogical Society today

If you are a regular reader of Mineralogical Magazine consider joining the Society and receiving your own copy six times a year at a very modest cost. Membership currently starts at £55 per annum. For this, you will receive bi-monthly copies of Elements, our international membership magazine (in full colour) on mineralogy, geochemistry and petrology as well as online access to Mineralogical Magazine, Clay Minerals and Elements. You may also opt to pay an additional premium in order to continue receiving paper copies of our journals. Full details on how to join the Society and an application form can be found on the Society's website at www.minersoc.org. Membership of the Society introduces you to a vibrant community of those interested in the mineral sciences. Through membership of one or more of the Society's eight special interest groups you can take an active part in the Society's numerous scientific meetings and conferences as described on the website.

Mineralogical Society Journals

Mineralogical Magazine

International journal of mineral sciences which covers the fields of mineralogy, crystallography, geochemistry, petrology, environmental geology and economic geology. This journal is available primarily as an e-journal.

Clay Minerals

International journal of clay minerals and fine particle science, published four times a year, including research papers about clays, clay minerals and related materials, natural or synthetic. The journal includes papers on Earth processes, soil science, geology/mineralogy, chemistry/material science, colloid/surface science and applied science and technology. The journal is available primarily as an e-journal.

Copyright

For both the paper and electronic versions, copyright of all papers accepted shall be assigned to the Mineralogical Society before publication, except where Crown Copyright is reserved.

CONTENTS

Neocrystallization of clay minerals in the Alhama de Murcia Fault (southeast Spain): implications for fault mechanics <i>Isabel Abad, Juan Jiménez-Millán, Catalina Sánchez-Roa, Fernando Nieto and Nicolás Vellilla</i>	1–13
K–Ar age determinations on the fine fractions of clay mineral ‘Crystallinity Index Standards’ from the Palaeozoic mudrocks of southwest England <i>Anna C. Schomberg, Klaus Wemmer, Laurence N. Warr and Georg H. Grathoff</i>	15–26
Coexisting nanoscale phases of K-illite, NH ₄ K-illite and NH ₄ -illite-smectite: an organic nitrogen contribution in the hydrothermal system of Harghita Băi, East Carpathians, Romania <i>Iuliu Bobos</i>	27–40
Density functional theory study of the stability of the tetrabutylphosphonium and tetrabutylammonium montmorillonites <i>Eva Scholtzová and Daniel Tunega</i>	41–48
Adsorption of 5-aminosalicylic acid on kaolinite surfaces at a molecular level <i>Mahmoud E. Awad, Elizabeth Escamilla-Roa, Ana Borrego-Sánchez, César Viseras, Alfonso Hernández-Laguna and C. Ignacio Sainz-Díaz</i>	49–56
Preparation of azobenzene-intercalated kaolinite and monitoring of the photoinduced activity <i>Anna Koteja and Jakub Matusik</i>	57–66
Iron catalyst supported on modified kaolin for catalytic wet peroxide oxidation <i>Ali Boukhemkhem, Kamel Rida, Alejandro H. Pizarro, Carmen B. Molina and Juan J. Rodriguez</i>	67–73
Comparison of microstructural features of three compacted and water-saturated swelling clays: MX-80 bentonite and Na- and Ca-purified bentonite <i>Michał Matuszewicz and Markus Olin</i>	75–81
Avoiding unrealistic behaviour in coupled reactive-transport simulations of cation exchange and mineral kinetics in clays <i>Steven Benbow, James Wilson, Richard Metcalfe and Jarmo Lehikoinen</i>	83–93
Geochemical and mineralogical characterization of smectites from the Venzia basin, western Macedonia, Greece <i>Stephan Kaufhold, George D. Chryssikos, George Kacandes, Vassilis Gionis, Kristian Ufer and Reiner Dohrmann</i>	95–107
Erratum A new collection of clay mineral ‘Crystallinity’ Index Standards and revised guidelines for the calibration of Kübler and Árkai indices – ERRATUM	109
