
A COURSE OF PURE MATHEMATICS

By G. H. HARDY

Seventh Edition. Revised and Reset. 12s. 6d. net

In this edition important changes have been made and the book has been reset. The contents of Appendix II have been incorporated in the appropriate places in the text. The parts of Chapters VI and VII which deal with the elementary properties of differential coefficients have been rewritten, and a large number of new examples from the papers for the Mathematical Tripos during the last twenty years have been inserted.

MATHEMATICAL TABLES VOLUME VI BESSEL FUNCTIONS

PART I. FUNCTIONS OF ORDERS ZERO AND UNITY

40s. net

Prepared by the Committee for the Calculation of Mathematical Tables.

FREQUENCY CURVES AND CORRELATION

By SIR W. PALIN ELDERTON

Third Edition. 12s. 6d. net

Originally published by C. and E. Layton, Limited, this work is now a standard text-book on curve-fitting and has been several times re-issued. In this new edition the author has made many alterations and has rewritten the chapters on Standard Errors, The Test of Goodness of Fit, and The Correlation Ratio-Contingency.

QUALITATIVE INORGANIC ANALYSIS

By A. J. BERRY

6s. net

This book, by the author of "Volumetric Analysis," takes account of new methods and conditions, and makes two radical departures from tradition: in the first place, the author has broken down the artificial distinction between the "common" elements and some of the "rare" elements, since many of the latter are now of great industrial importance; secondly, the use of a number of new reagents, particularly some organic compounds, is included for "spot tests," in order to acquaint the student with the rapid progress made in the way of applying new reagents and with the modern technique of analysis.
