eliminate the cross infection risk

Opulets
sterile, single dose
eye and ear preparations

To overcome the risk of contamination in eye and ear infections, Opulets have been developed as sterile, single dose eye and ear drop tubes and ointment capsules. Each is packed in a film sachet and sterilized by gamma radiation, ensuring effective sterilization with no loss of activity – the strict criteria of efficacy and safety being met in full.

After each application, these single dose units are discarded, eliminating cross infection risks – each treatment administered by either medical staff or the patient is thus under the most sterile conditions possible in practical medicine.

Opulets provide the lowest unit price available compared with all other preparations of a similar nature. Presentations available at present are:

Atropine Eye Ointment
Atropine Sulphate BP 0.5% w/w.
