

CAMBRIDGE – Important Topics in Neuropsychology and Related Fields

Neurotransmitter Release and its Modulation

Biochemical Mechanisms, Physiological
Function and Clinical Relevance

**David A. Powis and
Stephen J. Bunn, Editors**

A concise description of the basic
mechanisms involved in neurotransmitter
release modulation within the nervous
system, including a quantitative evaluation
of the significance of modulation, a
summary of its biological ramifications,
and potential clinical relevance.

1995 364 pp.
44068-8 Hardback \$115.00
44616-3 Paperback \$49.95

Neurobiological Effects of Sex Steroid Hormones

**Paul E. Micevych and
Ronald P. Hammer, Jr., Editors**

Examines the neurobiological bases for the
understanding of the interactions between
the sex hormones and the brain. It covers a
broad range of topics, extending from the
molecular and cellular processes, through the
action of steroids on neurotransmission, all
the way to defining the brain circuitry
involved in both male and female behavior.

1995 462 pp.
45430-1 Hardback \$84.95

Remembering Our Past

Studies in Autobiographical Memory

David C. Rubin, Editor

Reviews the subject of autobiographical
memory from the perspective of cognitive
psychology, while integrating social devel-
opmental, and clinical views. Covers such
topics as emotions, eyewitness memory,
false memory syndrome, and amnesia.

1995 448 pp.
46145-6 Hardback \$59.95

The Psychology of Associative Learning

David R. Shanks

Considers the informational basis of
learning, in terms of the memorization
of instances. It discusses at length the
application of connectionist models to
human learning.

Problems in the Behavioral Sciences 13

1995 206 pp.
44515-9 Hardback \$54.95
44976-6 Paperback \$24.95

Theoretical Approaches to Obsessive-Compulsive Disorder

Ian Jakes

Offers a critical discussion of the most
important theories explaining this disorder
and offers an entirely new approach to its
definition.

Problems in the Behavioral Sciences 14

1996 224 pp.
46058-1 Hardback about \$59.95

Photosensitive Epilepsy

New and Expanded Second Edition

**Graham F.A. Harding and
Peter M. Jeavons**

Includes details of many recent studies
including drug therapy and the genetics of
photosensitivity and also looks at the long
term prognosis for therapy.

Clinics in Developmental Medicine 133

1995 192 pp.
1-898-68302-6 Hardback \$59.95

Schizotypal Personality

**Adrian Raine, Todd Lencz, and
Sarnoff A. Mednick, Editors**

Explores the categorical and dimensional
approaches to the understanding of
schizotypal disorder, and its relationship
to schizophrenia, and reviews methodol-
ogical issues.

1995 c.300 pp.
45422-0 Hardback \$89.95

Akathisia and Restless Legs

Perminder Sachdev

The first comprehensive account of the
scientific and clinical aspects of akathisia
and related syndromes such as restless legs
syndrome (RLS), other forms of motor
restlessness, and neuroleptic-induced
dysphoria focusing on drug-induced
akathisia and its various subtypes.

1995 439 pp.
44426-8 Hardback \$69.95

The Depressed Child and Adolescent

Developmental and Clinical Perspectives

Ian M. Goodyer, Editor

Examines the nature and characteristics
of depression in children and adolescents
including the historical development of
the concept.

*Cambridge Monographs on Child and
Adolescent Psychiatry 1*

1995 378 pp.
43326-6 Hardback \$79.95

NEW FROM OXFORD UNIVERSITY PRESS

PEDIATRIC NEUROPSYCHOLOGY IN THE MEDICAL SETTING

Ida Sue Baron, Eileen B. Fennell,
and Kytja K.S. Voeller

This book provides a basis for understanding and evaluating the impact of medical conditions on the developing brain and offers much practical clinical information.

1995 464 pp.; 3 illus. \$55.00

APHASIA

A Clinical Perspective

D. Frank Benson and Alfredo Ardila

This book presents an up-to-date, integrated analysis of the language disturbances associated with brain pathology. In examining the different types of aphasia, the authors combine two clinical approaches: the neurological and the neuropsychological.

February 1996 200 pp.; 52 illus. \$45.00

CONTRIBUTIONS TO NEUROPSYCHOLOGICAL ASSESSMENT

A Clinical Manual

Second Edition

Arthur L. Benton, Abigail B. Sivan,
Kerry deS. Hamsher, Nils R. Varney,
and Otfried Spreen

"Not just another battery to use indiscriminately... but a precious kit of diagnostic tools among which the accomplished neuropsychologist will select those suited to answer the specific questions he has in mind."

—*Cortex*

1994 176 pp.; 13 illus. paper \$24.95

TRAUMATIC HEAD INJURY IN CHILDREN

Edited by Sarah H. Broman
and Mary Ellen Michel

Presenting a broad review of traumatic brain injury in children, this book covers its pathophysiology, treatment and outcome.

1995 320 pp.; 36 illus. \$45.00

HUMAN BRAIN ANATOMY IN COMPUTERIZED IMAGES

Hanna Damasio

"An excellent source for interpreting cortical brain anatomy in routine and experimental neuroradiological studies....Will be very helpful for more precise neuroradiological interpretations of brain lesions in clinical practice and in the research setting.... This book may serve as a benchmark for interpreting functional neuroimaging studies."

—*Doody's Journal*

1995 320 pp.; 262 illus. \$85.00

CLOCK DRAWING

A Neuropsychological Analysis

Morris Freedman, Larry Leach, Edith Kaplan,
Gordon Winocur, Kenneth Shulman,
and Dean C. Delis

Written by a multi-disciplinary team of experts in neurobehavior, this concise, well-illustrated book provides long-awaited normative data on clock drawing from ages 20 to 90 years.

1994 192 pp.; 56 illus. \$37.50

CHARCOT

Constructing Neurology

Christopher G. Goetz, Michel Bonduelle,
and Toby Gelfand

This book provides the best account of the life and contributions of Jean-Martin Charcot. It gives a fascinating picture of the man and his milieu, and clearly defines his role in establishing the new medical specialty of clinical neurology.

1995 416 pp.; 69 illus. \$55.00

NEUROPSYCHOLOGICAL ASSESSMENT OF NEUROPSYCHIATRIC DISORDERS

Second Edition

Edited by Igor Grant and Kenneth M. Adams

From reviews of the First Edition: "One of the best of a number of textbooks in recent years on clinical neuropsychiatry.... All the chapters are clearly written, thorough, and current and include outstanding bibliographies.... This book would be a welcome addition to the library of any neurologist or psychiatrist." —*The New England Journal of Medicine*

July 1996 608 pp.; 52 illus. \$65.00

NEUROPSYCHOLOGY OF HIV INFECTION

Igor Grant and Alex Martin

"This is an excellent summary of what has been learned about the neuropsychology of AIDS to date.... The near-consistent excellence of the contributions is remarkable.... The editors and contributors clearly hit their target.... Chapters will be mandatory reading for researchers in the area for years to come." —*Neuropsychology, Neuropsychiatry and Behavioral Neurology*

1994 402 pp.; 59 b&w illus. 2 plates color \$63.00

CLINICAL NEUROPSYCHOLOGY OF ATTENTION

Adriaan H. van Zomeren and Wiebo H. Brouwer

"This is an eminently clinically oriented book.... Very well-written.... This excellent book is most warmly recommended for clinical neurophysiologists and neurologists." —*E. Niedermeyer, Johns Hopkins University and Hospital, Electroencephalography and Clinical Neurophysiology*

1994 264 pp.; 39 illus. \$36.50

DEVELOPMENTAL NEUROPSYCHIATRY

Volume I: Fundamentals

Volume II: Assessment, Diagnosis, and Treatment of Developmental Disorders

James C. Harris

"These two books offer an integrated yet comprehensive conceptual approach to developmental neuropsychiatry. This two-volume set will be an essential resource not only for physicians but all professionals involved in the treatment of developmental disorders." —*From the Foreword by Joseph T. Coyle, Harvard Medical School*

Vol. I: 1995 288 pp.; 34 illus. \$49.95
Vol. II: 1995 624 pp.; 18 illus. \$79.95

CATASTROPHIC BRAIN INJURY

Edited by Harvey S. Levin, Arthur L. Benton,
J. Paul Muizelaar, and Howard M. Eisenberg

Integrating clinical and research findings on catastrophic brain injury, this work addresses the pathophysiology, definition, epidemiology and outcome of severe closed head injuries.

1995 282 pp.; 12 illus. \$39.95

NEUROPSYCHOLOGICAL ASSESSMENT

Third Edition

Muriel Deutsch Lezak

"Lezak's third edition is clearly the most comprehensive, scholarly and remarkable text in the field of clinical neuropsychology. It is well written and unquestionably will remain the most outstanding sourcebook for this generation." —*International Journal of Neuroscience*

1995 1056 pp.; 110 illus. \$65.00

CASE STUDIES IN CLINICAL NEUROPSYCHOLOGY Integrating Theory, Assessment, and Clinical Practice

Jenni A. Ogden

This book introduces clinical neuropsychology through vivid case descriptions that convey the human dimensions of brain disease and injury.

June 1996 368 pp.; 26 illus.
paper \$26.95/ cloth \$50.00

DEVELOPMENTAL NEUROPSYCHOLOGY

Otfried Spreen, Anthony H. Risser, and
Dorothy Edgell

"Rich in information, covers a wide range of topics and provides a good neurological, pediatric, and pathological background for the neuropsychologist reader.... A very useful addition to a virtually nonexistent literature."

—*Brain*

1995 688 pp.; 89 illus. paper \$39.95/ cloth \$65.00

Cambridge-Important Topics in Neuropsychology and Related Fields

Photosensitive Epilepsy

New and Expanded Second Edition
Graham F.A. Harding and Peter M. Jeavons

Includes details of many recent studies including drug therapy and the genetics of photosensitivity and also looks at the long term prognosis for therapy.

Clinics in Developmental Medicine 133

1995 192 pp.
1898-68302-6 Hardback \$59.95

Clinical Child Neuropsychiatry

Christopher Gillberg

A unique interdisciplinary examination of neurobiology, pharmacology, epidemiology and neuropsychology comprise this comprehensive reference to clinical assessment and treatment of the many neuropsychiatric disorders of childhood that at a conservative estimate effect five percent of all children.

1995 384 pp.
43388-6 Hardback \$79.95

Social Support and Psychiatric Disorder

Research Findings and Guidelines for Clinical Practice
T. S. Brugha, Editor

Looks at the social dimensions of mental illness, and collates and critically examines the information currently available on social support as it interacts with mental health.

Studies in Social and Community Psychiatry

1995 c.400 pp. 44238-9 Hardback \$79.95

Genius

The Natural History of Creativity

Hans Eysenck

Presents a novel theory of genius and creativity that is based on the personality of characteristics of creative persons and geniuses considering the role of intelligence, social status, gender, and many other factors that have been linked with genius.

Problems in the Behavioral Sciences 12

1995 354 pp. 48014-0 Hardback \$69.95
48508-8 Paperback \$27.95

AKATHISIA RESTLESS LEGS

Akathisia and Restless Legs

Preminder Sachdev

The first comprehensive account of the scientific and clinical aspects of akathisia and related syndromes such as restless legs syndrome (RLS), other forms of motor restlessness, and neuroleptic-induced dysphoria focusing on drug-induced akathisia and its various subtypes.

1995 439 pp.
44426-8 Hardback \$69.95

Cambridge Medical Reviews: Neurobiology and Psychiatry

Volume 3: Neuroimaging

Robert Kerwin, David Dawbarn, James McCulloch, and Carol Tamminga, Editors

Devoted to the important role of and advances in neuroimaging within psychiatry, this series of up-to-date topic-oriented reviews of current research acts

as an important information resource for all

clinical and laboratory workers in the field.

Cambridge Medical Reviews: Neurobiology and Psychiatry 3

1995 192 pp. 45365-8 Hardback \$89.95

The Depressed Child and Adolescent

Developmental and Clinical Perspectives

Ian M. Goodyer, Editor

Examines the nature and characteristics of depression in children and adolescents including the historical development of the concept.

Cambridge Monographs on Child and Adolescent Psychiatry 1

1995 378 pp. 43326-6 Hardback \$79.95

Schizotypal Personality

Adrian Raine, Todd Lencz, and Sarnoff A. Mednick, Editors

Explores the categorical and dimensional approaches to the understanding of schizotypal disorder, and its relationship to schizophrenia, and reviews methodological issues.

1995 c.300 pp. 45422-0 Hardback \$89.95

JOURNAL OF THE INTERNATIONAL NEUROPSYCHOLOGICAL SOCIETY

Instructions for Contributors

Aims and Scope

JINS welcomes scholarly contributions broadly reflecting the interests of all areas of neuropsychology. Coverage will include, but is not limited to, topics in adult neuropsychology, child neuropsychology, developmental neuropsychology, disorders of speech and language, and the interfaces of neuropsychology with related areas such as behavioral neurology, neuropsychiatry, neuroimaging and electrophysiology. Book Reviews will also be published.

Neuropsychological topics include theoretical considerations such as the development of cognitive processes, and brain-behavior relationships. Submissions are also encouraged that employ neuropsychological methods as either independent or outcome variables to illuminate the processes of various neurological, medical, and psychiatric disorders. The focus of the work may be primarily experimental, more applied or clinical. The key requirements are that it be original, creative, and of high quality.

To assure maximum flexibility and to promote diverse mechanisms of scholarly communication, it is intended to offer at least the following formats in addition to regular research articles: *Rapid Communications* which should be brief and are intended for "fast-breaking" new work which does not yet justify a full length article; *Case Studies* that report interesting individual cases; *Critical Reviews* which should be thoughtful considerations of topics of importance to neuropsychologists; *Updates* intended to provide an educational exposition of cognate fields, e.g., functional brain imaging, neuroepidemiology, ethical issues, etc; *Symposia* consisting of several research articles on a thematically linked area; *Dialogues* publishing arguments in a point-counterpoint form with two or more authors taking different positions on controversial issues in neuropsychology; and *Letters to the Editor* which should briefly report on observations or respond to recent articles in *JINS*.

Critical Reviews, Updates, Symposia and Dialogues may be invited by the Department Editor responsible, or may be proposed by authors. Such proposals should be discussed with the Editor-in-Chief or the appropriate Department Editor before submission.

Originality and Copyright

To be considered for publication in *JINS*, a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are reviewed with the assumption that all authors have approved the submitted manuscript and concur with its submission to *JINS*. A Copyright Transfer Agreement, with certain specified rights reserved by the author, must be signed and returned to the Editor by senior authors of accepted manuscripts, prior to publication. This is necessary for the wide distribution of research findings, and the protection of both author and the society under copyright law.

Manuscript Submission and Review

An original and four complete copies including figures and illustrations should be sent to:

Igor Grant, MD
Editor-in-Chief: *JINS*
Department of Psychiatry
Clinical Sciences Building, Room 249
University of California, San Diego
9500 Gilman Drive
La Jolla, CA 92093-0680

Phone: (619) 534-4306
Fax: (619) 552-4318
E-mail: jins@ucsd.edu

In a cover letter, the author should indicate the category under which a manuscript is submitted and should identify the corresponding author including phone number, fax number and electronic mail address (if available).

The Editor-in-Chief will acknowledge receipt of the manuscript, provide it with a manuscript reference number, and assign it for review to an Associate or Department Editor and at least two other reviewers. Every effort will be made to provide the author with a review within 10 weeks of manuscript assignment. *Rapid Communications* and *Letters to the Editor* will be reviewed within 6 weeks. If the Editor requests that revisions be made to a manuscript before publication, a maximum of 4 months will be allowed for preparation of the revision, except in unusual circumstances.

Manuscript Length

Regular Research Articles—maximum of 5,000 words and a 200 word abstract (approximately 20 double-spaced manuscript pages, not including references and tables) but exceptions will be considered for unusually large or complex studies. *Rapid Communications*—maximum 2,500 words and a 150 word abstract, approximately 10 double-spaced manuscript pages, with a maximum of two tables and/or two figures. *Rapid Communications* should list no more than 20 references. *Case Studies*—for interesting cases, maximum 2,500 words with an informative literature review and an abstract not exceeding 150 words. *Letters to the Editor*—maximum 500 words with up to five references, one table or one figure.

Manuscript Preparation and Style

The entire manuscript should be typed double-spaced throughout on 8-1/2" x 11" or A4 paper. Unless otherwise specified, the guideline for preparation of manuscripts is the *Publication Manual of the American Psychological Association* (4th edition). This may be ordered from: APA Order Dept., 750 1st St. NE, Washington DC 20002-4242, USA.

Pages should be numbered sequentially beginning with the Title Page. The Title Page should contain the full title of the manuscript, the full names and affiliations of all authors, a contact address with telephone and fax numbers, acknowledgments and support, and the name and address for requests for reprints. At the top right provide also a running headline (shortened title) of up to forty-five characters preceded by the lead author's last name. Example: Smith-Implicit Memory in Parkinson's. This running headline should be repeated at the top right of every following page.

The Abstract and Keywords Page (page 2) should include a brief statement of the problem, the method, the key findings, and the conclusions. For Case Studies there should be a brief summary of the case and its relevance to the existing literature. A list of three or four key words or terms should also be included.

The full text of the manuscript should begin on page 3. For scientific articles, including regular Research Articles and Rapid Communications, the format would include an Introduction, Method, Results, and Discussion. This should be followed by References, Tables, Figures, and Figure Legends printed on a separate sheet.

The use of abbreviations, except those that are widely used, is strongly discouraged. They should be used only if they contribute to better comprehension of the manuscript. Acronyms should be spelled out at first mention. Metric system (SI) units should be used.

Figures

High quality laser-printed copies or photocopies are acceptable. Figures should be numbered consecutively as they appear in the text. Mark each figure with the first author's name, the figure number and the orientation on the reverse of the originals and copies. Any indication of features of special interest should also be included. Figures should be drawn or composed on computer to about twice their intended final size and authors should do their best

to construct figures with notation and data points of sufficient size to permit legible photoreduction to one column of a two-column format. As a guide, no character should be smaller than 1 mm wide following reduction.

Color figures can be accepted. However, the extra costs of printing these figures must be paid by the author.

References

References should be in American Psychological Association style (see *Manuscript Preparation and Style* above).

Text references should be cited as follows: "The findings duplicated the results of an earlier study (Brown & Greene 1991)," or "The method used was an enhancement of Bell and Tower's (1973) and Jones et al.'s (1977). . . ." If multiple works by Jones et al. (1977) are cited, use a, b, c, in the order these appear in the text. Multiple references should be cited alphabetically: "Previous studies (Adams et al., 1980; Davies and Engler, 1985; Watson, 1987). . . ." References cited in the text with three or more authors should state et al. even at first mention. Reference entries should be alphabetically listed in the reference section with all authors being cited. Examples of the APA reference style are as follows:

Scientific Article:

Heaton, R.K., Grant, I., Anthony, W.Z., & Lehman, R.A.W. (1981). A comparison of clinical and automated interpretation of the Halstead-Reitan Battery. *Journal of Clinical Neuropsychology*, 3, 121-141.

Book:

Russel, E.W., Neuringer, C., & Goldstein, G. (1970). *Assessment of brain damage: A neuropsychological key approach*. New York: Wiley.

Chapter in Book:

Reitan, R.M. (1966). A research program on the psychological effects of brain lesions in human beings. In N.R. Ellis (Ed.), *International Review of Research in Mental Retardation*, Vol. 1 (pp. 153-218). New York: Academic Press.

Report at a Scientific Meeting:

Berman, K.F., Zec, R.F. & Weinberger, D.R. (1989, May). *Frontal cortical dysfunction in schizophrenia*. Symposia presentation, American Psychiatric Association, Washington, DC.

Manual, Diagnostic Scheme, etc.:

American Psychiatric Association (1994). *Diagnostic and Statistical Manual of Mental Disorders* (4th ed.). Washington, DC: American Psychiatric Association Press.

Manuscript Disk

When a manuscript has been accepted for publication, the authors are requested to submit a disk version of their manuscript along with two hard copies. The disk should be labeled with the manuscript number, the author's name and the original word-processing file. It should be noted that the disk file will be considered the final version of the manuscript.

Proofs

The publisher reserves the right to copyedit manuscripts. The corresponding author will receive page proofs for final proofreading. These should be checked and returned within 2 days of receipt. The publisher reserves the right to charge authors for excessive correction of nontypographical errors.

Offprints

The corresponding author will receive 25 free offprints. Additional offprints must be ordered when page proofs are returned. Price lists and order forms will be sent with page proofs.
