

NOTES FOR AUTHORS

Proceedings of the Royal Society of Edinburgh: Section A is a general journal, and papers in all areas of mathematics will be considered. Papers to be considered for publication should be sent to the Publications Manager, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

In view of the high cost of publication, authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate and preferably should be typewritten on one side of A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. For style of references at end of text, see recent issues of *Proceedings A*.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t., a.e., \forall , \exists , and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace $e^{(\dots)}$ by $\exp[...]$ if the expression in parenthesis is complicated. Simple formulae should *not* be displayed unless they require a formula number. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{}$ or the exponent 1/2 for the square root. Sub-subscripts and super-superscripts should be avoided if possible: bars and other devices over indices cannot be supplied.

Note that confusion very often arises between 1 (one) and l (ell); 0 (zero) and O (Capital oh); \circ (composition) and o (lower case oh); x and \times ; U and \cup ; c and \subset ; \in (belongs to) and ϵ (epsilon); \emptyset (empty set) and ϕ (phi); $;$ and comma $,$; prime ' and 1 ; K and κ ; p and ρ ; w and ω ; \sum (summation) and Σ (capital sigma); \prod (product) and Π (capital pi); v (lower case vee) and ν (Greek nu); a (lower case a) and α (Greek alpha); y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper *will be charged to the author*.

CONTENTS

FRÉDÉRIC ABERGEL	
A geometric approach to the study of stationary free surface flows for viscous liquids	209
YUN-GUANG LU	
The global Hölder-continuous solution of isentropic gas dynamics	231
GIOVANNI ALBERTI	
Rank one property for derivatives of functions with bounded variation	239
E. MEISTER, F. PENZEL, F.-O. SPECK and F. S. TEIXEIRA	
Some interior and exterior boundary-value problems for the Helmholtz equation in a quadrant	275
A. VERA-LÓPEZ and J. SANGRONIZ	
On class numbers of a finite group and of its subgroups	295
PHAM NGOC ÁNH and LÁSZLÓ MÁRKI	
Left orders in strongly regular rings	303
MARIA LUISA MASCARENHAS	
Memory effect phenomena and Γ -convergence	311
JEAN PIERRE PUEL and ENRIQUE ZUAZUA	
Exact controllability for a model of a multidimensional flexible structure	323
LAO SEN YU	
Asymptotic behaviour of finite energy solutions of polyharmonic equations	345
ABDULLAHI UMAR	
On the semigroups of partial one-to-one order-decreasing finite transformations	355
EDUARD FEIREISL	
Strong asymptotic stability for a beam equation with weak damping	365
YUAN-WEI QI	
On the equation $u_t = \Delta u^\alpha + u^\beta$	373
A. G. EARNEST	
The distribution of genera among quadratic spaces over global fields	391
MAHER ZAYED	
Primitive near-rings do not form an axiomatisable class	399
