## At the Cutting Edge of Research in Parasitology...

### HOOKWORM DISEASE: CURRENT STATUS AND NEW DIRECTIONS

Edited by **G. A. Schad** and **K. S. Warren**

"This is a book which successfully brings together relevant and up-to-date information on many aspects of human ancylostomiasis. It is very readable and as well as being of particular relevance to specialists it will also be of interest to other parasitologists who are not working directly in this field of research." (Nematologica 1991)

"It is a very welcome stimulus for further research and action to better understand the parasite and to be more successful in its control." (Tropical and Geographical Medicine 1991)

1990 Cloth 0 85066 762 3 £60.00 450pp

### PARASITIC NEMATODES

Edited by **M. W. Kennedy**

"The importance of Kennedy's findings has already influenced the pursuit of diagnostic antigens for filariasis, where it is clear that no single recombinant antigen is able to detect serum antibody in all members of an infected population....this text brings us up-to-date in so many other important issues and in so readable a style that I would strongly recommend it to beginners and veterans alike. The book eloquently bespeaks the impressive contributions made by scientists in the UK to nematode parasitology..." (Parasitology Today 1992)

1991 250pp Cloth 0 85066 772 0 £39.00

### BIOCHEMICAL PROTOZOOLOGY

Edited by **Graham Coombs** and **Michael North**

The last fifteen years have seen major advances in the understanding of the biochemistry of parasitic protozoa. However, until now there have been few attempts to cover this area comprehensively in a single volume. *Biochemical Protozoology* redresses this imbalance by offering a wide range of reviews complete with up-to-date information on the present status of research.

With 55 chapters written by experts in their respective subject areas, this book provides a valuable introductory source for biochemical protozoologists who wish to expand their knowledge and for scientists who wish to become familiar with the biochemistry of parasitic protozoa.

1991 Cloth 0 74840 000 1 £75.00 654pp Paper 0 74840 001 X £29.95

# Epidemiology and Infection

## Aims and Scope

Epidemiology and Infection presents reports of research and original findings in all subjects related to infectious diseases. It gives particular emphasis to the epidemiology, prevention and control of such diseases, but the field covered is broad and includes microbiology, virology, immunology, sanitary bacteriology, food hygiene, statistics and the clinical, diagnostic and social aspects of infectious diseases. Papers cover both the medical and veterinary field and come from scientists worldwide.

## Editorial Policy

Epidemiology and Infection started life as the 'Journal of Hygiene' and is now the longest established journal in the field of microbiology. When the journal started in 1901 a substantial part of medicine was involved with the control and cure of microbial diseases. Hygiene, or the science of health, was an appropriate term for a microbiology journal. *Epidemiology and Infection* has contained many important and seminal papers on such topics as scarlet fever, typhoid, pathogenic microbes in milk, bacteriological examination of water and the like.

It is still the home for important papers on these topics but also has become the key periodical in which to find the latest reports on recently discovered infections and new technology. In the new title, used since 1987, the word '*Infection*' reflects the broadly based nature of the journal and '*Epidemiology*' the particular slant of the journal since it was founded. The editors' overriding policy is to publish high quality articles in the shortest possible time (some articles are published in as little as 4 months). The success of this policy is shown by the very high submission rate from authors and the journal's high impact factor and long cited half life (SCI Journal Citation Report).

## Subscription Information

Six issues a year in 2 volumes. Volumes 108 & 109 in 1992. £138; £70 for members of the Society for Infectious Diseases and British Society for the Study of Infection. Airmail £29.50 per year extra. ISSN 0950-2688.

## Why You Should Subscribe

- high-quality articles
- international coverage
- rapid publication
- regular review articles
- covers wide subject area
- book reviews
- high quality & accurate production
- colour illustrations where this enhances understanding
- no page charges and free offprints for authors
- wide audience

## An Invitation to Subscribe!

Please enter my subscription to *Epidemiology and Infection* Volumes 108 & 109 in 1992 @  £138  £70 for members

Please invoice me

Please find enclosed a cheque (made payable to Cambridge University Press and drawn against a UK bank)

Please send by airmail @ £29.50 per year extra

I have not yet decided please send me a free sample copy
