Allison, D. On square values of quadratics	381
Arthurs, A. M. & Walsh, G. R. On Hammersley's minimum problem for a rolling sphere	529
Barnett, C. & Lyons, T. Stopping non-commutative processes	151
Baxter, L. A. Continuum structures II	331
Becker, H. Analytic sets from the point of view of compact sets	1
Bingham, N. H. & Tenenbaum, G. Reisz and Valiron means and fractional moments	143
Boyer, S. On the non-realizability of certain 3-manifolds by Dehn surgery	103
Cantrijn, F., Crampin, M. & Sarlet, W. Higher order differential equations and higher order Lagrangian mechanics	565
Cohen, F. R. & Neisendorfer, J. A. Note on desuspending the Adams map	59
Cohen, J. E. Connectivity of finite anisotropic random graphs and directed graphs	315
Crampin, M., Sarlet, W. & Cantrijn, F. Higher order differential equations and higher order Lagrangian mechanics	565
Dahmen, W., Micchelli, C. A. & Smith, P. W. Asymptotically optimal sampling schemes for periodic functions	171
Dawson, R. J. M. 'On the mobility of bodies in \mathbb{R}^n ' (Corrigendum.)	377
Dierolf, P. On Λ - Ω -extendable distributions	135
Dikshit, H. P. & Ojha, A. On convergence and quasiconformality of complex planar spline interpolation	347
Dilworth, S. J. Complex convexity and the geometry of Banach spaces	495
Dixon, P. G. & Drury, S. W. Unitary dilations, polynomial identities and the von Neumann inequality	115
Dold, A. Ramified coverings, orbit projections and symmetric powers	65
Drury, S. W. & Dixon, P. G. Unitary dilations, polynomial identities and the von Neumann inequality	115
Edmonds, A. L. & Ewing, J. H. Surface symmetry and homology	73
Edwards, D. A. A short proof of a theorem of Machado	111
Eplett, W. J. R. A fixed point approach to local minimax theory	339
Ewing, J. H. & Edmonds, A. L. Surface symmetry and homology	73
Fishel, B. Generalized translations associated with an unbounded self-adjoint operator	519
Friedman, H. M. & Scedrov, A. On the quantificational logic of intuitionistic set theory	5
Galambos, J. & Katai, I. A note on random walks in multidimensional time	163
Galdi, G. P., Knops, R. J. & Rionero, S. Uniqueness and continuous dependence in the linear elastodynamic exterior and half-space problems	357
Galloway, G. J. Curvature, causality and completeness in space-times with causally complete spacelike slices	367
Garling, D. J. H. Another 'short' proof of the Riesz representation theorem	261
Gaudry, G. I. & Pini, R. Bernstein's theorem for compact, connected Lie groups	297
Globevnik, J. Holomorphic maps of discs into balls of l^p -spaces	123
Gonzalez Acuña, F. & Short, H. Knot surgery and primeness	89
Goodman, F. M., Jorgensen, P. & Peligrad, C. Smooth derivations commuting with Lie group actions	307
Harman, G. Some theorems in the metric theory of diophantine approximation	385
Hennings, M. A. Fronsdal *-quantization and Fell inducing	179

Howie, J. & Pride, S. J. The word problem for one-relator semigroups	33
Hyyro, S., Merikoski, J. K. & Virtanen, A. Improving certain simple eigenvalue bounds	507
Ionescu, P. Generalized adjunction and applications	457
Jackson, D. A. Some one-relator semigroup presentations with solvable word problems	433
Jorgensen, P., Peligrad, C. & Goodman, F. M. Smooth derivations commuting with Lie group actions	307
Katai, I. & Galambos, J. A note on random walks in multidimensional time	163
Katz, D. & Ratliff, L. J. Jr. Form rings and projective equivalence	447
Knops, R. J., Rionero, S. & Galdi, G. P. Uniqueness and continuous dependence in the linear elastodynamic exterior and half-space problems	357
Lau, A. T.-M. Continuity of Arens multiplication on the dual space of bounded uniformly continuous functions on locally compact groups and topological semigroups	273
Little, G. Eigenvalues of positive integral operators with certain entire kernels	535
Livingston, C. Inequivalent, bordant group actions on a surface	233
Long, D. D. A note on the normal subgroups of mapping class groups	79
Love, E. R. Inequalities related to those of Hardy and of Cochran and Lee	395
Lyons, T. & Barnett, C. Stopping non-commutative processes	151
McGibbon, C. A. K -theory and finite loop spaces of rank one	481
Madden, J. & Vermeer, J. Lindelöf locales and realcompactness	473
Mason, R. C. Norm form equations. III. Positive characteristic	409
Merikoski, J. K., Virtanen, A. & Hyyro, S. Improving certain simple eigenvalue bounds	507
Micchelli, C. A., Smith, P. W. & Dahmen, W. Asymptotically optimal sampling schemes for periodic functions	171
Milnes, P. On Bohr almost periodicity	489
Morris, A. O. & Yaseen, A. K. Some combinatorial results involving shifted Young diagrams	23
Morton, H. R. Seifert circles and knot polynomials	107
Morton, H. R. Threading knot diagrams	247
Neisendorfer, J. A. & Cohen, F. R. Note on desuspending the Adams map	59
Nicas, A. J. An infinite family of non-Haken hyperbolic 3-manifolds with vanishing Whitehead groups	239
Odoni, R. W. K. A note on trigonometric sums in several variables	189
Ojha, A. & Dikshit, H. P. On convergence and quasiconformality of complex planar spline interpolation	347
Okniński, J. On the radical of semigroup algebras satisfying polynomial identities	45
Okniński, J. & Wauters, P. Radicals of semigroup rings of commutative semigroups	435
Peligrad, C., Goodman, F. M. & Jorgensen, P. Smooth derivations commuting with Lie group actions	307
Pinch, R. G. E. A sequence well distributed in the square	19
Pini, R. & Gaudry, G. I. Bernstein's theorem for compact, connected Lie groups	297
Porter, D. On some Cauchy-separable integral equations	547
Pride, S. J. & Howie, J. The word problem for one-relator semigroups	33
Ratliff, L. J. & Katz, D. Form rings and projective equivalence	447
Rionero, S., Galdi, G. P. & Knops, R. J. Uniqueness and continuous dependence in the linear elastodynamic exterior and half-space problems	357
Sankaran, G. K. Effective resolution of cusps on Hilbert modular varieties	51
Sarantopoulos, I. Estimates for polynomial norms on $L^p(\mu)$ spaces	263

Vaserstein, L. N. The subnormal structure of general linear group 425

Vermeer, J. & Madden, J. Lindelöf locales and realcompactness 473

Virtanen, A., Hyyro, S. & Merikoski, J. K. Improving certain simple eigenvalue bounds 507

Wall, C. T. C. Real forms of cusp singularities 213

Walsh, G. R. & Arthurs, A. M. On Hammersley's minimum problem for a rolling sphere 529

Wauters, P. & Okniński, J. Radicals of semigroup rings of commutative semigroups. 435

Wurfel, T. Extensions of pro- p groups of cohomological dimension two 209

Yaseen, A. K. & Morris, A. O. Some combinatorial results involving shifted Young diagrams 23

THE PREPARATION OF MANUSCRIPTS

The attention of authors is particularly directed to the following requests.

1. Papers should be typed, double-spaced, on one side of white paper (of which A4, 210 by 297 mm, is a suitable size). The pages must be numbered. Margins of 30 mm should be left at the side, top and bottom of each page. Two clear copies should be sent.

A cover page should give the title, the author's name and institution, with the address at which mail is to be sent.

The title, while brief, must be informative (e.g. *A new proof of the prime-number theorem*, whereas *Some applications of a theorem of G. H. Hardy* would be useless).

The first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician).

The following notes are intended to help the author in preparing the typescript. New authors may well enlist the help of senior colleagues, both as to the substance of their work and the details of setting it out correctly and attractively.

2. Notation

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to enlighten the task of the compositor and reduce the chance of error.

For instance n_k (n sub k) is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponentials like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the manuscript, italics, small capitals and capitals are specified by single, double and triple underlinings. Bold-faced type is shown by wavy underlining; wavy will be printed wavy.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \varnothing ; l , 1 ; ϵ , \in ; κ , k .

Greek letters can be denoted by Gk in the margin.

If an author wishes to mark the end of the proof of a theorem, the sign \square may be used.

Footnotes should be avoided.

3. Diagrams

It is extremely helpful if diagrams are drawn in Indian ink on white card, faintly blue or green-lined graph paper, or tracing cloth or paper. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the manuscript:

Figure 1 here

The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The Society recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and it is therefore willing to have such diagrams re-drawn, provided that they are clear.

4. Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

5. References

References should be collected at the end of the paper numbered in alphabetical order of the author's names. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a paper in a journal, a paper in a proceedings volume, a book and an unpublished dissertation:

- [1] J. F. ADAMS. On the non-existence of elements of Hopf invariant one. *Ann of Math.* (2) 72 (1960), 20–104.
- [2] M. P. FOURMAN and D. S. SCOTT. Sheaves and logic. In *Applications of Sheaves*. Lecture Notes in Math. vol. 753 (Springer-Verlag, 1979), pp. 302–401.
- [3] P. T. JOHNSTONE. *Stone Spaces*. Cambridge Studies in Advanced Math. no. 3 (Cambridge University Press, 1982).
- [4] F. W. LAWVERE. Functional semantics of algebraic theories. Ph.D. thesis, Columbia University (1963).

*Mathematical Proceedings of
the Cambridge Philosophical Society*

MPCPCO 99 (Pt 3) 381–604 (1986) 0305–0041 May 1986

CONTENTS

	PAGE
ALLISON, D. On square values of quadratics	381
HARMAN, GLYN. Some theorems in the metric theory of diophantine approximation	385
LOVE, E. R. Inequalities related to those of Hardy and of Cochran and Lee	395
MASON, R. C. Norm form equations. III: positive characteristic.	409
VASERSTEIN, L. N. The subnormal structure of general linear groups.	425
JACKSON, DAVID A. Some one-relator semigroup presentations with solvable word problems	433
OKNIŃSKI, J. & WAUTERS, P. Radicals of semigroup rings of commutative semigroups	435
KATZ, DANIEL & RATLIFF, L. J. Form rings and projective equivalence	447
IONESCU, PALTIN. Generalized adjunction and applications	457
MADDEN, J. & VERMEER, J. Lindelöf locales and realcompactness	473
MCGIBBON, C. A. <i>K</i> -theory and finite loop spaces of rank one	481
MILNES, PAUL. On Bohr almost periodicity	489
DILWORTH, S. J. Complex convexity and the geometry of Banach spaces	495
HYRÖ, SEPPÖ, MERIKOSKI, JORMA KAARLO & VIRTANEN, ARI. Improving certain simple eigenvalue bounds	507
FISHEL, B. Generalized translations associated with an unbounded self-adjoint operator	519
