Managing Editors
Mark Pollicott, University of Warwick, UK
S. van Strien, University of Warwick, UK

Ergodic Theory and Dynamical Systems focuses on a rich variety of research areas which, although diverse, employ as common themes global dynamical methods. The journal acts as a forum for central problems of dynamical systems and of their interactions with differential geometry, number theory, operator algebras, celestial and statistical mechanics and biology

CAMBRIDGE UNIVERSITY PRESS

Editor-in-Chief
I. A. B. Strachan, University of Glasgow, UK

The *Glasgow Mathematical Journal* publishes original
research papers in any branch of pure and applied
mathematics. An international journal, it features a wide
variety of research areas, including ring theory, functional
analysis, combinatorics, differential equations, number
theory, algebraic topology, and the application of such
methods in applied mathematics.

Journal of Fluid Mechanics

Editors
S. H. Davis, Northwestern University , USA
M. G. Worster, University of Cambridge, UK

Journal of Fluid Mechanics publishes authoritative articles covering theoretical, computational and experimental investigations of all aspects of the mechanics of fluids. Papers discuss both the fundamental aspects of fluid mechanics, and their applications to other fields such as aeronautics, astrophysics, physiology, chemical and mechanical engineering, oceanography, geology, and combustion.

MSCS
Mathematical Structures in Computer Science
A journal in the applications of categorical, algebraic and geometric methods in Computer Science

AUGUST 2008   VOLUME 18   NUMBER 4

CAMBRIDGE
UNIVERSITY PRESS

Mathematical Structures in Computer Science

Editor-in-Chief

G. Longo, CNRS and Ecole Normale Supérieure, Paris, France

Mathematical Structures in Computer Science is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers of a high standard and broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work.

INSTRUCTIONS FOR CONTRIBUTORS

Editorial policy The journal publishes *research papers* and *survey papers*

Research papers may be in any area of applied mathematics, with especial emphasis on *new mathematical ideas relevant to modelling and analysis in modern science and technology and the development of interesting mathematical methods of wide applicability*. There is no restriction in the scope or style of mathematics as long as the content is presented to be as accessible as possible to the entire community of mathematicians and mathematical scientists. This applies in particular to the Introduction and conclusion. Standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.

Survey papers aim to bridge the gap between academia and industry by presenting mathematical methods relevant to industry in its broadest sense, ranging from manufacturing to finance, telecommunications to biotechnology, and describing industrial problems of interest to mathematicians. Coverage includes reviews of techniques in relation to industrial application, new problem areas for which mathematical models and techniques are not yet available, comparison of solution methods, and descriptions of modelling approaches.

Submission of manuscripts Papers may be submitted to any of the Editors.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. **Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.**

Authors are encouraged to submit papers electronically by sending a pdf file in the first instance, to ejam@maths.ox.ac.uk;. On final acceptance of a paper, authors should send the LaTeX source code to the Editors-in-Chief, together with a pdf file derived from these files. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Details of Style Files The LaTeX 2.09 style file ejm.sty together with a guide to its use ejmguide.tex, or the corresponding LaTeX 2e file ejm.cls are available via anonymous ftp from the Cambridge University Press site at ftp.cup.cam.ac.uk in the directories /pub/texarchive/ journals/ latex/ejm-sty or /pub/texarchive/journals/latex/ejm-cls. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. The file readme.txt contains instructions alternatively, authors may use plain 'article' style.

Layout of manuscripts Papers should be typewritten **in double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words, and they should end with a brief concluding section. The SI system of units must be used throughout. There is no formal restriction on length, but short papers are likely to appear sooner than long ones (over 20 typeset pages) which are likely to be subject to delay.

Illustrations Wherever possible figures should be produced and incorporated into the text using a standard \LaTeX-compatible package; they will be reproduced with the author's lettering. *Illustrations* Wherever possible figures should be produced and incorporated into the text using a standard \LaTeXcompatible package; they will be reproduced \emph{with} the author's lettering. Colour figures may be published at no charge in the online edition; a charge of £500 for each full page in colour will be levied for authors requesting colour reproduction in the printed version of the journal. All figures and reference to the figures must be equally comprehensible in both colour and greyscale. Exemption from charges for colour reproduction will only be made if referees decide that colour is essential, and if authors make an explicit case to the Editor explaining why they are unable to meet the extra cost. Exemption from charges for colour reproduction will only be made if referees decide that colour is essential, and if authors make an explicit case to the Editor explaining why they are unable to meet the extra cost.

References The Harvard system of references is preferred. References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (underlined); inclusive page numbers.

Citations in the text Any of the following three ways of citing a 1992 paper by A. European may be used: European (1992); European [Eu]; or European [7]. In the second case, the reference at the end of the text should be preceded by [Eu], and in the third by [7].

Proof Reading Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Incremental Publishing and DOIs

The European Journal of Applied Mathematics now publishes articles incrementally online (at Cambridge Journals Online: journals.cambridge.org) as soon as author corrections have been completed and before they join a printed issue. A new reference has now been added to the first page of the article in the journal catchline. This is the DOI–The Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. http://www.journals.cambridge.org/ejm

Offprints No paper offprints will be supplied. Each author will have access to electronic offprints in pdf form for distribution.

Editorial note Following recent developments in electronic publishing at Cambridge University Press, we are pleased to announce that starting with the Volume 12, Part 5 issue of European Journal of Applied Mathematics, each article and book review will be annotated with a digital object identifier (DOI). A DOI gives each article and book review a code made up of a Cambridge University Press Prefix and a unique numerical identifier number, which is a code increasingly in use for items published on the web. Such articles and book reviews can then be referenced and retrieved as separate items. DOIs will also be useful for citing and identifying individual articles as separate entities, without the need to list specific journal, volume or issue details.
