

ERRATUM

Several typographical errors have been discovered in Table 1 of Folstein *et al.* 'Brief report on the clinical reappraisal of the DIS' (Vol. 15, p. 811). The correct values are as follows: the number of CR cases of current antisocial personality is 3790; the specificity of the DIS for the diagnosis of schizophrenia is 0.98; the positive predictive value of the DIS for the diagnosis of major depressive disorder is 0.21.
