Preface *page* ix
Notation xi
Abbreviations xiii

1 Measurement of wireless transceivers 1
1.1 Introduction 1
1.2 Linear two-port networks 1
1.2.1 Microwave description 1
1.2.2 Noise 6
1.3 Linear FOMs 7
1.3.1 Linear network FOMs 7
1.3.2 Noise FOMs 9
1.4 Nonlinear two-port networks 10
1.4.1 Nonlinear generation 11
1.4.2 Nonlinear impact in wireless systems 14
1.5 Nonlinear FOMs 16
1.5.1 Nonlinear single-tone FOMs 16
1.5.2 Nonlinear two-tone FOMs 19
1.5.3 FOMs for nonlinear continuous spectra 28
1.6 System-level FOMs 34
1.6.1 The constellation diagram 34
1.6.2 The error-vector magnitude 37
1.6.3 The peak-to-average power ratio 38
1.7 Filters 38
1.8 Amplifiers 39
1.8.1 Linear and noise FOMs 40
1.8.2 Nonlinear FOMs 45
1.8.3 Transient FOMs 46
1.9 Mixers 47
1.9.1 Two-port FOMs 48
1.9.2 Three-port FOMs 50
1.10 Oscillators 51
1.10.1 Oscillator FOMs 51
1.11 Frequency-multiplier FOMs 54

Published online by Cambridge University Press

1.12 Digital converters 56
1.12.1 Figures of merit 57
Problems 61
References 61

2 Instrumentation for wireless systems 63
2.1 Introduction 63
2.2 Power meters 63
2.2.1 How to measure power 65
2.2.2 The thermocouple principle 67
2.2.3 The diode probe principle 69
2.2.4 Power-meter architecture 71
2.2.5 Power-meter sources of error 72
2.2.6 Calibration of the power meter 74
2.3 Spectrum analyzers 75
2.3.1 The spectrum 75
2.3.2 Spectrum-analyzer architectures 77
2.3.3 Basic operation of a spectrum analyzer 83
2.3.4 Specifications of a spectrum analyzer 86
2.3.5 The accuracy of a spectrum analyzer 94
2.4 Vector signal analyzers 97
2.4.1 Basic operation of a vector signal analyzer 98
2.5 Real-time signal analyzers 101
2.5.1 The RTSA block diagram 103
2.5.2 The RTSA spectrogram 104
2.5.3 RTSA persistence 105
2.5.4 The RTSA spectrum trigger 106
2.6 Vector network analyzers 107
2.6.1 Architecture 108
2.6.2 Calibration 111
2.6.3 VNA measurement uncertainty 115
2.7 Nonlinear vector network analyzers 115
2.7.1 Architecture 116
2.7.2 Calibration 117
2.8 Oscilloscopes 118
2.9 Logic analyzers 121
2.9.1 Logic-analyzer probes 122
2.9.2 Sampling the logic data 124
2.9.3 Triggering 124
2.9.4 Real-time memory 125
2.9.5 Analyzing the acquired signal 125
2.10 Noise-figure measurement 125
2.10.1 Noise-figure measurement using a noise source 126
2.10.2 Noise-figure measurement without a noise source 128

Published online by Cambridge University Press

2.10.3 Accuracy and uncertainty of noise-figure measurement 130
Problems 130
References 131

3 Signal excitation 133
3.1 Introduction 133
3.2 One-tone excitation 134
3.2.1 One-tone generation mechanisms 135
3.2.2 One-tone instrumentation 140
3.3 Two-tone excitation 143
3.3.1 Two-tone generation mechanisms 145
3.4 Digitally modulated signals 148
3.4.1 The multi-sine 149
3.4.2 Complex modulated signals 158
3.5 Chirp signals 160
3.6 Comb generators 161
3.7 Pulse generators 162
Problems 164
References 164

4 Test benches for wireless system characterization and modeling 166
4.1 Introduction 166
4.2 Test benches for characterization 166
4.2.1 Power-meter measurements 166
4.2.2 Noise-figure measurements 169
4.2.3 Two-tone measurements 171
4.2.4 VNA measurements 178
4.2.5 NVNA measurements 183
4.2.6 Modulated signal measurements 187
4.2.7 Mixed-signal (analog and digital) measurements 195
4.2.8 Temperature-dependent measurements 197
4.3 Test benches for behavioral modeling 197
4.3.1 Introduction 197
4.3.2 Volterra-series modeling 199
4.3.3 State-space modeling 205
4.3.4 Beyond *S*-parameters 208
Problems 213
References 213
