

COLLEGE SEMINARS SERIES

Seminars in Basic Neurosciences

Edited by Gethin Morgan and Stuart Butler

Seminars in Basic Neurosciences is a textbook covering all aspects of the nervous system relevant to psychiatry. It reviews fundamental concepts of structure and function as well as the applied clinical neurosciences, and is unique in providing this authoritatively in a single volume. As with other books in the College Seminars Series, there are many figures, diagrams, tables and boxes to make the information accessible and more easily absorbed. The book will be of particular value to trainee psychiatrists studying for their Membership examinations, but will also appeal to established clinicians and psychologists interested in updating their knowledge of the fast-moving field of neuroscience. ISBN 0-902241-61-3 328 pp.

COLLEGE SEMINARS SERIES

Seminars in Psychiatric Genetics

By P. McGuffin, M.J. Owen, M.C. O'Donovan, A.Thapar & I.I.Gottesman

Psychiatric genetics is one of the most rapidly expanding fields in biological psychiatry and one which promises much for future advances. This book provides a comprehensive coverage of what is known of the genetics of psychiatric disorders, including the dementias, mental retardation, childhood disorders and adult mental illnesses, as well as providing an introduction to the relevant quantitative and molecular genetic methods. This is the first single volume to provide a concise overview of the field of psychiatric genetics.

COLLEGE SEMINARS SERIES

Seminars in Psychology and the Social Sciences

Edited by Digby Tantam and Max Birchwood

Seminars in Psychology and the Social Sciences is a book about basic science for the clinical scientist – psychiatrists (particularly those in training), clinical psychology students, general practitioners, community psychiatric nurses and social workers. Each chapter comprehensively reviews the current state of one aspect of the basic science as it relates to mental health. In some instances the links between clinical practice and the most recent theories considered in this book have yet to be made. However, over the next decade many of these are likely to dominate the research and service agenda, such as ethnicity as a determinant of health care, connectionist models of mental functioning, and the effects of sex and gender on mental health. For the trainee as well as for the clinician looking for new paradigms in the social sciences, the book will prove an essential source.
