

*“The Dutch astronomer De Sitter was able to show that the velocity of propagation of light cannot depend on the velocity of motion of the body emitting the light... theoretical investigations of H.A. Lorentz...lead[s] conclusively to a theory of electromagnetic phenomena, of which the law of the constancy of the velocity of light in vacuo is a necessary consequence.”*

– Albert Einstein

*“Energy of a type never before encountered.”*

– Spock, *Star Trek: The motion picture.*
