## BIOSOCIAL ASPECTS OF HUMAN FERTILITY

Proceedings of the seventh annual symposium of the Eugenics Society  
London, September 1970

P. R. COX

General introduction

### Physiological and environmental aspects

G. W. HARRIS

Coordination of the reproductive processes

ALAN S. PARKES

Environmental influences on human fertility

P. P. S. NYLANDER

Biosocial aspects of multiple births

### Fertility in different populations

D. M. POTTS

Human fertility in global perspective

J. CLYDE MITCHELL

Cultural explanations of fertility differences

JOAN BUSFIELD and

GEOFFREY HAWTHORN

Some social determinants of recent trends in British fertility

### Sociological aspects

D. J. OLDMAN, W. R.

BYTHEWAY and GORDON

HOROBIN

Family structure and educational achievement

DUGALD BAIRD

**The Galton Lecture 1970:** The Obstetrician and Society

### Problems of fertility control

P. F. SELMAN

Domiciliary family planning services: a reappraisal

PETER DIGGORY

The unwanted pregnancy

K. JOHN DENNIS

Sex education in schools—why and how?

Price £3.00; US \$8.50

# THE GALTON FOUNDATION

## For the promotion of biosocial science

The Galton Foundation was established as a charitable Trust in memory of Sir Francis Galton and in recognition of his outstanding contributions to biosocial science. Its interests lie in the common ground between the biological and social sciences.

### Trustees

Mrs Mary Adams  
Mrs Frances Dennis  
Professor Sir Alan Parkes (Chairman)

Dr G. Ainsworth Harrison  
The Lord Platt

### Journal of Biosocial Science

The Foundation owns and manages the *Journal of Biosocial Science* which, as detailed in the Notice to Contributors, caters for material within the biological aspects of the social sciences and the social aspects of human biology. *JBS* is published quarterly in January, April, July and October.

### Grants

The Foundation is not in a position to make large grants, but will consider applications for small amounts, especially in connection with the study of the circumstances attending unwanted conception. There is also a small fund available for facilitating overseas travel (usual maximum £50).

### Equipment Pool

The Foundation has a number of Harpenden anthropometers and skinfold calipers in its pool of instruments and other equipment appropriate to field or laboratory work of a biosocial nature. The Foundation's aim is to make equipment available, by loan or hire according to circumstances, where the requirement is short-term or funds inadequate. No single item will exceed £100 in value.

London SW1V 1PJ**

# JOURNAL OF BIOSOCIAL SCIENCE

## Notice to Contributors

The *Journal of Biosocial Science* publishes original papers, reviews, lectures, proceedings and major book reviews dealing with social aspects of human biology, including reproduction and its control, gerontology, ecology, genetics and applied psychology; with biological aspects of the social sciences, including sociology, social anthropology, education and criminology; and with biosocial aspects of demography. Preference will be given to material which is clearly interdisciplinary.

Papers are considered for publication on the understanding that they have not been, and will not be, published elsewhere in whole or in part, and that, where customary, they have been approved for publication by the relevant Head of Department. The Editor is not responsible for any loss of or damage to manuscripts or illustrations and his decision on all editorial matters is final. This journal is covered by *Current Contents* and *Biological Abstracts*.

**Manuscripts** should be sent in duplicate to the Executive Editor, *Journal of Biosocial Science*, 7 Downing Place, Cambridge CB2 3EL. They should be clearly typewritten, on one side of the paper only, with a 1½ inch margin, and be double-spaced and in the English language. Spelling should follow that of the *Concise Oxford Dictionary*. Where English is not the language of the country of origin, a translation of the English summary into that language may additionally be provided for publication.

Papers must be written clearly, simply and concisely. They should be checked very carefully before being submitted. The author is responsible for the accuracy of quotations, tabular matter and references.

An original paper should not include an extensive review of the literature, but only sufficient references to indicate the purpose and relevance of the investigation. Methods which have been recorded previously should be described only briefly and in general terms, but the author's modifications, if any, may be given in detail. Text, tables and figures must be internally consistent and not repetitious. Results should be described concisely and discussion limited to the significant new findings. Theoretical exercises should be such as to lead to conclusions of general interest. Reviews should be authoritative and well documented.

The Editor reserves the right to make minor literary emendations in the final editing, but manuscripts will not be altered substantially without consultation with the author or marked unless the paper is thought provisionally to be acceptable.

Manuscripts should bear the title of the paper, name of the Institution where the work was done and, as a footnote, the present postal address of the author if different from that of the Institution. Titles should be brief, but informative, and should indicate the nature of the contents, not their import. A short title, to serve as a running head and consisting of not more than 50 letters (including spaces), should also be given on the title page. A summary not exceeding 5% of the length of the paper should precede the text. Section headings may be of four orders which in print will appear as: centre bold, centre italics, side raised italics and side inset italics; of these, the first and third are normally sufficient. Acknowledgments should be made at the end of the text in a separate section. Footnotes should be avoided except as indicated above.

**Diagrams** must be numbered as Text-figures and should bear the author's name, short title of the paper and figure number on the back. Captions for Text-figures should be typed on a separate sheet. Visual aids of this kind should be used where possible to replace or supplement tabular matter.

**Tables** should be typed on separate sheets, be given Arabic numbers and be headed by adequate captions. Their approximate position in the text should be indicated by a note in the margin. They should not exceed in size the equivalent of one page of print. Weights and measurements should be given in metric units, with standard abbreviations ( $\mu\text{g}$ , mg, g, kg; ml, l; mm, cm, m, km, °C). Other abbreviations which should be used include %, <, >, hr, min. The 24-hr clock should be used to indicate the time of day. Abbreviations as such, should not be followed by, and initials need not be separated by, full points (e.g. FPA). Mean values should, where possible, be accompanied by standard errors or similar statistical indications of variance.

**References** in the text should be given in the manner that is standard in the Journal. Titles of journals should be abbreviated according to the *World List of Scientific Periodicals*, 4th edn (1964) and its supplements, and as also given in *World Medical Periodicals*.

An unpublished paper should not be cited among the references unless it has specifically been accepted for publication by a particular Journal, in which case the words (in press) should be used in place of the volume and page number of the journal.

**Proofs** will be sent to contributors for minor corrections, and should be returned to the Editor within one week. Special attention should be given to the checking of tables, mathematical formulae and Text-figures. Major alterations to the text will be accepted only at the author's expense. Overseas contributors are advised to arrange for a proof-reader in Great Britain. The date of receipt given at the head of the paper is that on which the script as published was received or agreed.

**Offprints.** 25 offprints together with a copy of the issue of the Journal in which the paper appears will be supplied free to the author, or, where there are two or more, to the author responsible for ordering offprints. Additional offprints up to the limit of 500 may be purchased if ordered on the form sent out with the proofs.

**Page charge.** There is no charge to authors for publication in *J. biosoc. Sci.*

© Galton Foundation. No part of this publication may be reproduced or stored in a retrieval system in any form or by any means without the permission of both the Galton Foundation and the author.

# INTERNATIONAL PLANNED PARENTHOOD FEDERATION

## **Social Science Grants**

The IPPF is offering its first research grants in the field of social sciences.

The aim of the grants is to increase the social science input into family planning programmes for the benefit of the latter.

Research projects must be attached to a research institution, with a scientific supervisor from that institution. The topic and objectives of the research must be practically useful in the sense of contributing to the effectiveness of a family planning or population-related programme, and must be based on actual or anticipated problems faced by the programme.

Applications are invited from staff of family planning programmes and post-graduate students in the social sciences who are resident citizens of a developing country where a family planning programme, to which the research is linked, is operating.

Application forms and guidelines to applicants are available from:

Director of Evaluation and Social Sciences Department,  
International Planned Parenthood Federation,  
18–20 Lower Regent Street,  
London, S.W.1,  
England.

Completed application forms must be received by 30 June 1975.

# ANNALS OF HUMAN GENETICS

VOL. 31, PART 1, JULY 1974

## CONTENTS

Probable assignment of the locus determining human red cell acid phosphatase *ACP*, to chromosome 2 using somatic cell hybrids. SUSAN POVEY, DALLAS M. SWALLOW, M. BOBROW, I. CRAIG and VERONICA VAN HEYNINGEN

The genetics of placental alkaline phosphatase: a possible 'null' allele. LYNDA J. DONALD and ELIZABETH B. ROBSON

The red cell 6-phosphogluconate dehydrogenase polymorphism in certain Southern African populations, with the first report of a new phenotype. T. JENKINS and G. T. NURSE

A study of possible factors influencing the variation in liver alcohol dehydrogenase activity in individuals of the 'usual' ADH phenotype. ELIANE AZEVEDO, MOYRA SMITH, D. A. HOPKINSON and HARRY HARRIS

The genetics of the Lp antigen: I. Its quantitation and distribution in a sample population. J. S. SCHULTZ, D. C. SHREFFLER, C. F. SING and N. R. HARVIE

The genetics of the Lp antigen: II. A family study and proposed models of genetic control. C. F. SING, JANE S. SCHULTZ and D. C. SHREFFLER

Regulation in man  $\times$  man somatic cell hybrids: possible negative control of arylsulphatase. A. M. C. HORS-CAYLA, S. HEUERTZ, J. Y. PICARD and J. FRÉZAL

Early fusion of two human embryos? A. DE LA CHAPELLE, J. SCHRÖDER, PENTTI RANTANEN, B. THOMASSON, M. NIEMI, ANJA TIILIKAINEN, RUTH SANGER and ELIZABETH B. ROBSON

Facial and oral form in sibs of children with cleft lip with or without cleft palate. J. D. ERICKSON

A study of parental age effects on the occurrence of fresh mutations for the Apert syndrome. J. D. ERICKSON and M. M. COHEN JR

D/D translocations in newborn children. URSULA FRIEDRICH and J. NIELSEN

£3.50 net (\$10.50 in USA and Canada). Annual Subscription £12.00 net (\$36.00 in USA and Canada) for four parts.
