Annals of Glaciology

Polar ice, polar climate and polar change. Part 2: Sea ice

Published by Cambridge University Press for
the International Glaciological Society
Cambridge, UK

The Annals of Glaciology is a thematic journal published by Cambridge University Press for the International Glaciological Society 2–4 times a year. All papers are peer-reviewed and edited.

The accuracy of references in the text and lists is the responsibility of the authors, to whom queries should be addressed.

Printed in the UK, by Bell & Bain Ltd., Glasgow.

PREFACE

This issue of *Annals of Glaciology* focuses on ice in the Arctic and Antarctic and the profound changes that are taking place. Nearly all of the 20 papers in *Polar Ice, Polar Climate and Polar Change*, covering, in sequence, the Antarctic Ice Sheet, the Greenland Ice Sheet and sea ice, make extensive use of satellite or airborne remote sensing – arguably the most important transformation in the study of polar ice in the past generation. Our ability to recognize, track, and diagnose climate-related changes in the cryosphere has hinged on developments in detection and measurement of ice from afar. This issue demonstrates state-of-the-art applications of remote sensing data to sea ice mapping and processes, ice flow, surface melt lakes and ponds, and sub-ice physical properties.

Additional studies center on application of the two other pillars of modern earth science – modelling and advanced *in situ* measurements. As cryospheric remote sensing has matured, and led to a research environment that is now data-rich, models and *in situ* measurements have come to the fore, and will be increasingly important in coming decades, as investigations seek to explain what has been observed from space, or strive to understand components of the system that cannot be detected remotely.

Annals of Glaciology is a peer-reviewed thematic journal published by Cambridge University Press on behalf of the International Glaciological Society. A team of 10 Scientific Editors (listed above) with wide expertise were responsible for assessing the papers in this issue. They acknowledge and are grateful for the work of a large number of peer-reviewers for their critical assessments and efforts to improve the manuscripts.

The topics of polar ice, polar climate, and polar change that led to this volume of *Annals of Glaciology* were the subject of an international symposium held in Boulder, Colorado on the 14th–19th of August, 2017, with 165 delegates attending. The conference was jointly sponsored by the University of Colorado National Snow and Ice Data Center, the Cooperative Institute for Research in Environmental Sciences, the Institute for Arctic and Alpine Studies and the National Center for Atmospheric Research.

Mark C. Serreze

CONTENTS

Ekaterina A. Cherniavskaia, Ivan Sudakov, Kenneth M. Golden, Courtenay Strong, Leonid A. Timokhov	Observed winter salinity fields in the surface layer of the Arctic Ocean and statistical approaches to predicting large-scale anomalies and patterns	83
Sohey Nihashi, Nathan T. Kurtz, Thorsten Markus, Kay I. Ohshima, Kazutaka Tateyama, Takenobu Toyota	Estimation of sea-ice thickness and volume in the Sea of Okhotsk based on ICESat data	101
Wiebke Aldenhoff, Céline Heuzé, Leif E.B. Eriksson	Comparison of ice/water classification in Fram Strait from C- and L-band SAR imagery	112
Dmitrii Murashkin, Gunnar Spreen, Marcus Huntemann, Wolfgang Dierking	Method for detection of leads from Sentinel-1 SAR images	124
K. Duncan, S. L. Farrell, L. N. Connor, J. Richter-Menge, J. K. Hutchings, R. Dominguez	High-resolution airborne observations of sea-ice pressure ridge sail height	137
R. K. Scharien, R. Segal, J. J. Yackel, Sel Howell, S. Nasonova	Linking winter and spring thermodynamic sea-ice states at critical scales using an object-based image analysis of Sentinel-1	148
Anja Rösel, Jennifer King, Anthony P. Doulgeris, Penelope M. Wagner, A. Malin Johansson, Sebastian Gerland	Can we extend local sea-ice measurements to satellite scale? An example from the N-ICE2015 expedition	163
Jean Negrel, Sebastian Gerland, Anthony P. Doulgeris, Tom Rune Lauknes, Line Rouyet	On the potential of hand-held GPS tracking of fjord ice features for remote-sensing validation	173
Thomas J. Ballinger, Edward Hanna, Richard J. Hall, Thomas E. Cropper, Jeffrey Miller, Mads H. Ribergaard, James E. Overland, Jacob L. Høyer	Anomalous blocking over Greenland preceded the 2013 extreme early melt of local sea ice	181
Ge Peng, Walter N. Meier	Temporal and regional variability of Arctic sea-ice coverage from satellite data	191
Hoi Ming Lam, Gunnar Spreen, Georg Heygster, Christian Melsheimer, Neal W. Young	Erroneous sea-ice concentration retrieval in the East Antarctic	201
