

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

On non-linear elliptic equations and the stability of soap film	
Công Nghê Truong	353
Centralisers of Galois group actions	
Mark Kisin	363
Perfect codes on the towers of Hanoi graph	
Chi-Kwong Li and Ingrid Nelson	367
Quasi-convex functions and Hadamard's inequality	
S.S. Dragomir and C.E.M. Pearce	377
Semigroup rings in semisimple varieties	
A.V. Kelarev	387
Curves with continuous curvatures in Euclidean spaces	
Vitaly Ushakov	393
Finite-dimensional simple modules over quantised Weyl algebras	
Nobuyuki Fukuda	403
The predual of the space of convolutors on a locally compact group	
Michael Cowling	409
Structural implications of norms with Hölder right-hand derivatives	
Michael O. Bartlett, John R. Giles and Jon D. Vanderwerff	415
PF-rings of generalised power series	
Zhongkui Liu	427
Iteration processes for approximating fixed points of operators of monotone type	
Shih-Sen Chang and Kok-Keong Tan	433
An oscillation estimate to a variational inequality	
Hyeong-Ohk Bae and Hi Jun Choe	447
On a theorem of Bryce and Cossey	
A. Ballester-Bolinches and L.M. Ezquerro	455
The reduced group C^*-algebra of a triangle building	
A.M. Mantero and Z. Zappa	461
The modular counterparts of Cayley's hyperdeterminants	
David G. Glynn	479
Quotients of permutation groups	
John Cossey	493
Exponential actions, orbits and their kernels	
J. Ludwig and C. Molitor-Braun	497
On the conjecture of Jesmanowicz concerning Pythagorean triples	
Moujie Deng and G.L. Cohen	515

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Tests based on sample partial autocorrelations	
Simon F. Ku	525
