Matters of Life and Death

Perspectives on Public Health, Molecular Biology,
Cancer, and the Prospects for the Human Race

John Cairns

John Cairns has made significant contributions to cancer research, molecular biology, and virology. Here he explains what is known about cancer today and about molecular biology in terms that are easily understood by people with little or no scientific training.

In this fascinating book, Cairns explores the revolution in public health, the origins and principles of molecular biology, and our emerging understanding of the causes of cancer. Finally, he discusses how these developments are likely to affect future generations.

"Graceful essays from the pen of a keen observer who is blessed with a wide-ranging intellect and a familiarity with molecular biology, human origins, epidemiology, and the origins of human cancer."—Robert A. Weinberg, author of *Racing to the Beginning of the Road*

Cloth £23.00 ISBN 0-691-02872-9

New in paperback The Private Science of Louis Pasteur Gerald L. Geison

"In revealing . . . discrepancies between Pasteur's private activities and the accounts he subsequently published of those activities, Geison's aim is not to discredit Pasteur or his contributions to science. On the contrary, he gives full credit to Pasteur's brilliance as an experimenter. But he also makes clear the extent to which Pasteur's public reputation depended not just on his ability to manipulate his experimental materials in the laboratory,

but also on his ability to control and manipulate the information that issued from his laboratory."—Steve Sturdy, *Medical History*

"Geison makes Pasteur in many ways worthier of our admiration than the saintly figure of legend was."—*The Economist*
