

# Acta Numerica 1995

## CONTENTS

Sequential quadratic programming

*Paul T. Boggs*

A taste of Padé approximation

*C. Brezinski and J. Van Iseghem*

Introduction to adaptive methods for differential equations

*Kenneth Eriksson, Don Estep, Peter Hansbo and Claes Johnson*

Exact and approximate controllability for distributed parameter systems

*R. Glowinski and J. L. Lions*

Numerical solutions to free boundary problems

*Thomas Y. Hou*

Particle methods for the Boltzmann equation

*Helmut Neunzert and Jens Struckmeier*

The new qd algorithms

*Beresford N. Parlett*

Acta Numerica is an annual publication containing invited survey papers by leading researchers in a number of areas.

The papers present overviews of recent developments in their area and provide 'state of the art' techniques and analysis.
