Edinburgh Journal of Botany

An International Journal of Plant Systematics and Biodiversity

Published on behalf of the Royal Botanic Garden Edinburgh

Senior Editor

David J. Middleton, Royal Botanic Garden, Edinburgh, UK

Edinburgh Journal of Botany is an international journal of plant systematics and related aspects of bio-diversity, conservation science and phytogeography. It covers all groups of plants and fungi and publishes contributions on all geographic areas, although it is particularly valued for its articles on South East and South West Asian, Sino-Himalayan and Brazilian biodiversity. Papers linking traditional and modern taxonomic techniques are especially encouraged, and commissioned book reviews and review articles are also included. There is an international editorial board of wide-ranging expertise delivering a high quality, fully illustrated journal.

Notes for Contributors

Instructions to authors for submission of manuscripts to *Plant Genetic Resources: Characterization and Utilization*

Submission

Manuscripts should be submitted by e-mail, in the form of attachments sent to the journal administrator Faye Kalloniatis (mailto:plantgenetic-resources@googlemail.com). Manuscripts must be written in good English in double-spaced 12pt Times New Roman, using a current version of Microsoft Word or OpenOffice.org Writer. Figures and Tables should be included as separate attachments, and not pasted within the body of the text. Material submitted for publication in the print copy of the journal can be supported by supplementary material (figures or tables) which will be published online only. Any supplementary material must be submitted as separate attachment(s), each clearly marked as "supplementary figures" or "supplementary tables".

Peer review process

All manuscripts are peer reviewed by two referees, who may or may not choose to remain anonymous. The journal makes every effort to complete the peer review process as quickly as possible, and generally this is achieved within 6 weeks of receipt of the manuscript. Articles which the editor considers may be accepted subject to modification must be resubmitted to the journal within 1 month of their return date in order to be considered part of the original submission. If this deadline is passed, a resubmission will be considered as a new manuscript. If authors choose to resubmit, they must provide, in a covering letter, a detailed point-by-point response to all the criticisms raised by each of the reviewers, and where appropriate, those raised by the editor.

Copyright

The journal needs your agreement to publish your article and you will be sent a 'Transfer to copyright' form along with your first set of proofs. The form must be completed and returned to Cambridge University Press.

Types of article

The journal accepts two forms of research report – full articles and short communications. The format of these is detailed separately below. Authors should note that the journal will not review submissions using the RAPD marker system, except where very large numbers of assays place a cost limitation on the analysis, or where RAPD data is combined with, and is co-analysed with other forms of descriptive data, which allows an objective means of assessing the credibility of the RAPDs.

Full articles

The *title page* should carry the title of the article and the authors' names and addresses. Also indicate the name and include the e-mail address of the corresponding author. The e-mail address is particularly important as page proofs will be sent electronically as a .pdf file to the corresponding author for checking. (See 'page proofs' section below).

The *text* must be divided into sections, each beginning on a new page. The sections consist of *Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgements, References, Tables, Figure legends*. In exceptional circumstances, the *Results* and *Discussion* sections can be combined, but where this has been done, the authors must provide a justification for doing so in their covering letter. The *Abstract* should not normally consist of more than 200 words, and in no case should exceed 300 words. It should indicate the scope and main conclusions of the paper. Below the text, add a list of keywords for indexing purposes.

The *Introduction* should be no more than 750 words long. It should explain why the work was done, and briefly introduce the scope and contents of the paper.

The *Materials and Methods* section should detail experimental design and statistical analysis and should be kept as brief as possible with the aid of appropriate citation to the literature (e.g. for standard methods etc.).

Results should be recorded in the past tense.

The *Discussion* should interpret the results, and present them in the broader context of other work on the subject. It should not simply be a restatement of the results.

Citations within the text should be listed in chronological order, by author and date, using 'and' between names of joint authors and, for those with more than two authors, citing only the first author *et al.* (e.g. White *et al.*, 1993). The final list of references should be in the following format, and listed by alphabetical order of author, e.g.

Gregory RS (1985) Triticale breeding. In: Lupton FGH (ed.) *Wheat Breeding: Its Scientific Basis*. London: Chapman and Hall, pp. 20-30.

Kingston-Smith AH, Bollard AL, Humphreys MO and Theodorou MK (2002) An assessment of the ability of the stay-green phenotype in *Lolium* species to provide an improved protein supply for ruminants. *Annals of Botany* 89: 731-740.

Marshall DR and Brown AHD (1973) Stability of performance mixtures and multilines. *Euphytica* 22: 405-412.

Smith JE (1988) The effects of roguing on the frequency of atypical winter wheat plants. PhD Thesis, University of Nottingham.

Tables should be numbered consecutively (Table 1, Table 2 ..., NOT Table 1a, 1b, etc). Each should be headed by a caption worded in a way which makes it self-explanatory. Tables intended for the print copy must be no larger than one A4 page in portrait typed in 12pt font. These restrictions do not apply to tables presented as online supplementary material. *The number of tables in the print copy is limited to four.* All tables (both print copy and online supplementary) should be prepared as text files (MS Word or similar), and not as spreadsheets (MS Excel or similar). Supplementary tables must be labelled consecutively Table S1, Table S2 etc.

Figures must be submitted as jpeg files (not powerpoint). The size of the file containing all the figures intended for the print copy should not exceed 2Mb. The number of figures is limited to four per article. Authors will be asked to make a financial contribution towards the cost of printing colour illustrations. Additional figures can be published as online supplementary material, and these should be clearly labelled and referred to in the text as Figure S1, Figure S2, etc. No cost recovery is expected for online colour illustrations.

Note that the total number of tables plus figures appearing in the print copy may not exceed six.

Please indicate the optimum placement of all tables and figures within the text.

Both the Figures and the Tables should be organized into a separate file. All supplementary material must also be presented within separate file(s) (Supplementary Tables and/or Supplementary Figures).

Short communications

These will be limited to a maximum of 1000 words of text, plus two figures or tables (or one of each). Section headings should normally be restricted to *Abstract, Experimental, Discussion, Acknowledgements, References*. This form of communication has been explicitly designed to reflect the format of poster presentations.

Page proofs

Once typeset, the corresponding author will receive page proofs by e-mail as a .pdf file. You will be asked to return the corrections via email (no later than 4 days after receipt). There is also a copyright transfer form in the file; this needs to be signed and returned along with the offprint order.

Offprints

With the .pdf proof, the corresponding author will also be e-mailed an offprint order form. If offprints of the paper are required, the appropriate form should be completed, using the price scale provided, and returned with the corrected proof to the proofreader. You will be provided with a final .pdf file by e-mail at no expense. You will also be sent a 'Terms and Conditions' form which outlines how you may use your .pdf file.

Plant Genetic Resources Characterization and Utilization

Contents

Germplasm resources in legumes <i>T. H. Noel Ellis</i>	1
Phylogeny, phylogeography and genetic diversity of the <i>Pisum</i> genus <i>Petr Smýkal, Gregory Kenicer, Andrew J. Flavell, Jukka Corander, Oleg Kosterin, Robert J. Redden, Rebecca Ford, Clarice J. Coyne, Nigel Maxted, Mike J. Ambrose and Noel T. H. Ellis</i>	4
Genetic and genomic resources of lentil: status, use and prospects <i>Abebe Tullu, Axel Diederichsen, Galina Suvorova and Albert Vandenberg</i>	19
Review Article	
Genetic resources of lentil and its utilization in India <i>Mohar Singh, Saroj Sardana and Shyam Kumar Sharma</i>	30
Genetic resources in <i>Trifolium</i> and their utilization in plant breeding <i>Michael T. Abberton and Ian Thomas</i>	38
Genomic tools and germplasm diversity for chickpea improvement <i>Hari D. Upadhyaya, Mahendar Thudi, Naresh Dronavalli, Neha Gujaria, Sube Singh, Shivali Sharma and Rajeev K. Varshney</i>	45
Large genetic variation for heat tolerance in the reference collection of chickpea (<i>Cicer arietinum</i> L.) germplasm <i>L. Krishnamurthy, P. M. Gaur, P. S. Basu, S. K. Chaturvedi, S. Tripathi, V. Vadez, A. Rathore, R. K. Varshney and C. L. L. Gowda</i>	59
Sainfoin (<i>Onobrychis viciifolia</i>): a beneficial forage legume <i>Christine Hayot Carbonero, Irene Mueller-Harvey, Terence A. Brown and Lydia Smith</i>	70
Genetic diversity of Colombian landraces of common bean as detected through the use of silver-stained and fluorescently labelled microsatellites <i>Lucy M. Díaz, Héctor F. Buendía, Myriam C. Duque and Matthew W. Blair</i>	86
Pigeonpea composite collection and identification of germplasm for use in crop improvement programmes <i>H. D. Upadhyaya, K. N. Reddy, Shivali Sharma, R. K. Varshney, R. Bhattacharjee, Sube Singh and C. L. L. Gowda</i>	97
The worldwide utilization of the Chinese soybean germplasm collection <i>Li-Juan Qiu, Peng-Yin Chen, Zhang-Xiong Liu, Ying-Hui Li, Rong-Xia Guan, Li-Hui Wang and Ru-Zhen Changr</i>	109
Managing self-pollinated germplasm collections to maximize utilization <i>Randall L. Nelson</i>	123
An overview of peanut and its wild relatives <i>David J. Bertioli, Guillermo Seijo, Fabio O. Freitas, José F. M. Valls, Soraya C. M. Leal-Bertioli and Marcio C. Moretzsohn</i>	134
