

EDITORIAL

This issue of *Clay Minerals* is devoted entirely to papers presented at a conference on 'diagenesis, overpressure and reservoir quality' held at the University of Cambridge on 25–26 March, 1993. This conference was the fifth in a series of meetings at the University of Cambridge on the general theme of clay minerals and petroleum exploration and was again organized by Dr C. V. Jeans on behalf of the Clay Minerals Group under the auspices of the Mineralogical Society of Great Britain, the Petroleum Exploration Society of Great Britain, the London Petrophysical Society and the Geological Society of London. Dr Jeans has also contributed an introduction to the issue.

Thanks are due to Dr P. L. Hall, Dr H. F. Shaw and Professor D. A. Spears who handled all the manuscripts through the review stages.

This issue has been financed separately from normal issues of the journal and publication has been supported financially by learned societies,

oil companies and companies servicing the oil industry; these are as follows:

Amerada Hess Ltd
Arco British Ltd
Chevron (UK) Ltd
Clyde Petroleum plc
Deminex UK Oil & Gas Ltd
GAPS Geological Consultants
London Petrophysical Society
Mineralogical Society of Great Britain
Mobil North Sea Ltd
Petroleum Exploration Society of Great Britain
Ranger Oil (UK) Ltd
Royal Society
Schlumberger Cambridge Research Ltd
Shell UK Exploration & Production Ltd
Universität Bern

This issue is available on an individual basis at a cost of £22 or US\$40 per copy from the Mineralogical Society office (details on inside front cover).
