PHOTOVOLTAIC TECHNOLOGIES

Comparison of Multi-crystalline Silicon PV Modules' Performance Under Augmented Solar Irradiation	3
Yang Hu, Dave Hollingshead, Mohammad A. Hossain, Mark Schuetz, and Roger French	
* Ceramic IR Emitter with Spectral Match to GaSb PV Cells for TPV	11
Lewis M. Fraas and Kuanrong Qiu	
Nanostructured Transparent Conductive Oxides for Photovoltaic Applications	23
Roger E. Welsler, Adam W. Sood, Jaehee Cho, E. Fred Schubert, Jennifer L. Harvey, Nibir K. Dhar, and Ashok K. Sood	

CONCENTRATED PHOTOVOLTAICS (CPV)

High Efficiency Solar to Electric Energy Conversion through Spectrum Splitting and Multi-channel Full Spectrum Harvesting	31
Lirong Zeng Broderick, Tiejun Zhang, Marco Stefancich, Brian R. Albert, Evelyn Wang, Gang Chen, Peter Armstrong, Matteo Chiesa, Lionel Kimerling, and Jurgen Michel	
* Realizing the World's First Upgradeable, 40-year Lifetime High Concentration Photovoltaic (HCPV) System—An Accelerated Pathway to Grid Parity	37
Hojun Yoon, Sameet Nabar, and Yoav Banin	

*Invited Paper

NEXT GENERATION SOLAR CELLS

Exfoliated ~25µm Si Foil for Solar Cells with Improved Light-trapping51
S. Saha, E.U. Onyegam, D. Sarkar, M.M. Hilali, R.A. Rao,
L. Mathew, D. Jawarani, D. Xu, R.S. Smith, U.K. Das,
J.G. Fossum, and S.K. Banerjee

Optical Properties and Limits of a Large-area Periodic Nanophotonic Light Trapping Design for Polycrystalline Silicon Thin Film Solar Cells59
Daniel Lockau, Tobias Sontheimer, Veit Preidel,
Christiane Becker, Florian Ruske, Frank Schmidt,
and Bernd Rech

Point Focus Solar Spectral Splitting System for CPV Applications65
Ahmed Zayan, Matteo Chiesa, and Marco Stefancich

Application of Quantum Dots to Solar Cells to Increase Efficiency71
Chris Botros and Richard Savage

Photoluminescent Effects on the Temperature Coefficient of Multi-junction Solar Cells77
Alaeddine Mokri and Mahieddine Emziane

Study of the Electrical Behavior in Intermediate Band-Si Junctions85
D. Pastor, J. Olea, A. del Prado, E. García-Hemme,
R. García-Hernansanz, L. González-Pariente, I. Mártel,
and G. González-Díaz

Quantum-kinetic Theory of Defect-mediated Recombination in Nanostructure-based Photovoltaic Devices91
Urs Aeberhard

OPV AND NEXT GENERATION SOLAR CELLS

Transparent Platinum Counter Electrode for Building Integrated Dye-sensitized Solar Cells99

PREFACE

Symposium E, “Photovoltaic Technologies – Materials, Devices and Systems”, and Symposium H, “Small Molecule Organic Solar Cells,” were held Nov. 25– 30 at the 2012 MRS Fall Meeting in Boston, Massachusetts.

Our energy needs have been forecast to at least double within the next fifty years. Therefore, unless renewable energy can cover the large deficit that fossil fuels can no longer furnish, the stage is set for a major energy shortage. One promising solution is the conversion of solar energy into usable electric power. However, in conventional single-junction solar cells, the maximum efficiency for the conversion of unconcentrated solar radiation is 31%, because a significant part of solar energy is lost due to thermalization of photocarriers, and another part is lost due to poor or no absorption of below band gap photons. To minimize thermalization losses, and to increase the conversion efficiency, it is well understood that the electron energy levels should be adjusted to the incoming photons.

Therefore, this symposium volume is focused on approaches proposed for reaching or exceeding the SQ thermodynamic limit of solar energy conversion. Highlighted are recent advances in some relevant areas of the wide field of photovoltaic technologies such as (1) Silicon and Thin Film Solar Cells, (2) Dye Sensitized Solar Cells, (3) Small Molecule Organic Solar Cells, and (4) High Efficiency Concepts (e.g., MEG, IBSC, multijunction cells, Q-BIC, hot electron cells, photon management and photon recycling etc.). The physics required to approach or exceed the SQ limit, fundamental limitations of solar energy conversion, and some exciting recent development for advanced concepts, e.g., light trapping and spectrum splitting, are introduced.
