Vol 153

Supplement 3

PROGRESS IN ANTIDEPRESSANT THERAPY

*Fluoxetine: a comprehensive overview.
Proceedings of a symposium held in Telfs,
Austria, on 16–18th October 1987*

Edited by
Hugh Freeman

Published by
The Royal College of Psychiatrists

ISSN 0007-1250

NOTICE TO CONTRIBUTORS

1. *The British Journal of Psychiatry* is published monthly under the auspices of the Royal College of Psychiatrists. The *Journal* publishes original work in all fields of psychiatry. Communications on general editorial matters, including manuscripts for publication, printed matter, and books for review, should be sent to *The Editor, The British Journal of Psychiatry, 17 Belgrave Square, London SW1X 8PG.*

2. Contributions are accepted for publication on the condition that their substance has not been published or submitted for publication elsewhere. The *Journal* does not hold itself responsible for statements made by contributors. Unless so stated, material in the *Journal* does not necessarily reflect the views of the Editor or the Royal College of Psychiatrists.

3. Published articles become the property of the *Journal* and can be published elsewhere, in full or in part, only with the Editor's written permission.

4. Manuscripts accepted for publication are subject to copy-editing, and to editorial changes required for conformity with *Journal* style.

5. We regret that papers unsuitable for publication will not be returned.

6. **General advice to authors** In the assessment of manuscripts submitted to the *Journal*, great importance is attached to clarity and brevity of expression. Authors should read *General Notes on the Preparation of Scientific Papers* (3rd ed. 1974, £0.45, from The Royal Society) and/or Judith Butcher's *Typescripts, Proofs and Indexes* (1980, Cambridge University Press, £2.95). Spelling should follow the *Concise Oxford Dictionary*.

The standard of statistical work in papers submitted for publication has proved to be very variable. Authors using any statistical methods at all are strongly advised to study the paper 'Statistical guidelines for contributors to medical journals' (D. G. Altman *et al*, *British Medical Journal*, 7 May 1983, **286**, 1489–1493) at the earliest possible stage in preparing their work for publication.

7. **Manuscripts** Two high-quality copies should be submitted and the author should retain a copy. Articles must be typed on one side of the paper only, **double spaced with wide margins**, and all the pages must be numbered sequentially, starting with the title page.

a. The **title** should be brief and to the point. If necessary, a sub-title may be used to amplify the main title. The names of the authors should appear on the title-page, and **their names, degrees, affiliations and full addresses at the end of the paper.**

b. A **summary** should be given at the *beginning* of the article. It should be brief and factual and not normally more than 150 words.

c. **References** should be listed **alphabetically** at the end of the paper, **the titles of journals being given in full.** Authors should follow *Journal* style for the reference list and study the examples given below. Titles of books and journals are printed in *italic* and should therefore be underlined on the typescript. Reference lists not in *Journal* style will be returned to the author for correction.

Authors should check that the text references and the reference list are in complete agreement as regards dates and spelling of names. The text reference should be in the form '(Smith, 1971)' or 'Smith (1971) showed that ...'

DURKHEIM, E. (1897) *Le Suicide*. Paris. Translated (1952) as *Suicide: A Study in Sociology*, by J. A. Spaulding & C. Simpson. London: Routledge & Kegan Paul.

KENDELL, R. E. (1974) The stability of psychiatric diagnoses. *British Journal of Psychiatry*, **124**, 352–358.

RUTTER, M., TIZARD, J. & WHITMORE, K. (1970) *Education, Health and Behaviour*. London: Longman.

SCOTT, P. D. (1974) Definition, classification, prognosis and treatment. In *Pathology and Treatment of Sexual Deviation* (ed. I. Rosen) Oxford: Oxford University Press.

'Personal Communications' need written authorisation.

d. **Symbols and abbreviations** Follow *Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors* (3rd ed. 1977), £2.00, available from the Publications Office of the Royal Society of Medicine. Terms or abbreviations which might not be understood by the average reader should be explained at first occurrence.

e. **Tables and Figures** Each table should be on a separate sheet, with an adequate heading; table and heading should be self-explanatory without reference to the text. The desired position of the table relative to the text should be indicated in the left margin.

Figures should be individual glossy photographs, or other camera-ready prints, *not* photocopies, clearly numbered and captioned below. Avoid cluttering figures with explanatory text which is better incorporated succinctly in the caption. A figure intended to occupy a single column should be drawn (or photographed) 80–110 mm wide to allow for a 2/3 reduction; a figure requiring the whole width of the page should be 180–210 mm wide. Lettering (film-set or stencil) should be 12pt sans (initial capital for the first word only) to give 8pt on the printed page. Labels on graphs should read parallel to the axes. Units must be clearly indicated and should be in brackets (*note*—'litre' should be spelled out in full unless modified to ml, dl, etc.).

f. **Photographs** Prints must be taken directly from the original b/w negative (not, for example, from a colour slide or a printed page) and should be glossy and sharply focussed. Labels, arrows, etc. should be shown on a duplicate print or overlay. Do not write anything on photographic prints, and do not use staples or paper-clips on them. These procedures apart, all the comments on figures and tables apply equally to photographs.

8. **Proofs** A proof will be sent to the senior author of an article. Reprints, which are prepared at the same time as the *Journal*, should be ordered when the proof is returned to the Editor.

9. **Letters to the Editor** Letters should not exceed two double-spaced typed pages. They will be edited for clarity and conformity with *Journal* style and may be shortened. There should be no more than five references; tables and figures cannot be used.
