

Models of the Labyrinth

These models (King's College Hospital pattern) were devised by

Mr A. H. CHEATLE
and

Mr NEGUS
for teaching purposes
and for investigating
labyrinthine diseases.

The pointers on the Head frame lie parallel with the Frankfort plane, so that when the frame is on the head the models lie in correct orientation in all respects. The patient's head can be put in any position and the exact relations of each of the canals are seen; rotation and caloric tests can be carried out with the frame in position.
